CORRECTION NOTE

As stated on page 111, chapter C corresponds to the PC(1)-C individual State reports. After completion of the computer tabulation on which the PC(1)-C reports were based, a misclassification was discovered between the farm and nonfarm components of the rural population. This misclassification did not affect the data for the rural area as a whole, or for urban areas or the State as a whole. Certain portions of the tabulation were reprocessed for presentation in chapter C and corrected farm-nonfarm figures are presented here. As a result of this reprocessing, however, the distributions by certain characteristics for the total rural population implicit in the farm-nonfarm data presented in tables 48 to 58, 70 to 80, and 134 to 137 may not always be consistent with the area-wide totals shown in chapter C; these differences, which are relatively minor, may occur in the data on school enrollment, residence in 1965, occupation, income, and poverty.

Table C-4. Percent of Allocation or Substitution for Nonresponse for Selected Characteristics, for Places of 10,000 or More and Counties: 1970

(Data based on sample, see text. The term "allocation" means that a characteristic was assigned in the absence of a machine-readable entry or changed to make consistent with other entries during the computer editing. For minimum base for derived figures (percent, median, etc.) and meaning of symbols, see text)
