POPULATION DIVISION

Meyer Zitter, Chief

ACKNOWLEDGMENTS—Many persons participated in the various activities of the 1970 census. Primary direction of the program was performed by **Conrad Taeuber**, former Associate Director for Demographic Fields, assisted by **David L. Kaplan**, 1970 Census Coordinator, and in conjunction with **Paul R. Squires**, Associate Director for Data Collection and Processing, and **Joseph Waksberg**, Associate Director for Statistical Standards and Methodology.

This report was planned and its content developed in the Population Division by **Patricia A. Berman**, of the Ethnic and Racial Statistics Staff, under the direction of **Paul C. Glick**, Senior Demographer, and **Tobia Bressler**, Special Assistant on Ethnicity. Professional contributions to the content of the report were made by **Gaille R. Maller** and **Nampoo R. McKenney**. **Elizabeth A. Larmon** and **Karen M. Mills** assisted in the preparation of textual materials. The work was under the general supervision of **Meyer Zitter**, Division Chief, and **Herman P. Miller** (Chief to 1972). Important contributions to the determination of the content of the PC(2) series of reports were made by a number of advisory groups and individuals representing or affiliated with universities, research organizations, professional associations, government agencies, and other groups.

The procedures for sample selection, sample weighting, and computation of sampling variances were developed in the Statistical Methods Division, under the supervision of **Morton Boisen**, Chief, and **Robert H. Hanson**, Assistant Division Chief, assisted by **William T. Alsbrooks**, **Peter A. Bounpane**, **Barbara A. Boyes**, and **Carlton W. Pruden**.

Geographic plans and procedures were developed in the Geography Division under

the supervision of **William T. Fay**, then Chief, and **Robert C. Klove** and **Gerald J. Post**, Assistant Division Chiefs.

Data collection activities were administered by the Field Division, **Richard C. Burt**, Chief, and **Dean H. Weber**, Assistant Division Chief, with the assistance of the directors of the Bureau's data collection centers.

Systems and processing procedures were developed under the direction of **Morris Gorinson**, Assistant Chief, Demographic Census Staff. **Florence Wright**, assisted by **John F. Powell** and **Orville M. Slye**, was responsible for the clerical procedures and **Roger O. Lepage**, assisted by **Margaret P. Brooks**, **Stephen E. Goldman**, **Carol T. Schlechten**, and **Richard R. Warren**, was responsible for the computer programming. **Donald R. Dalzell** was responsible for the computer procedures and programs used for the electronic preparation of tables in this report.

The manual processing and microfilming of the questionnaires and the review of tabulation controls were performed in the Data Preparation Division (formerly Jeffersonville Census Operations Division), under the direction of **Robert L. Hagan**, then Chief, with the assistance of **Rex L. Pullin**. The manual coding operations were supervised by **John C. Campbell**, assisted by **Herbert J. Hough**, **Joe D. Kolb**, and **Leo C. Schilling**. **William L. Pangburn** supervised the microfilming operation. **Dan N. Harding**, assisted by **Nora H. Shouse**, was responsible for the tabulation review work.

FOSDIC and computer processing were performed in the Computer Services Division under the supervision of **James R. Papal**,

Chief, and **E. Richard Bourdon**, **C. Thomas DiNenna**, and **James W. Shores**, Assistant Division Chiefs. Development of the FOSDIC equipment was directed by **William M. Gaines**, Assistant Division Chief, and **McRae Anderson**. Development of the automatic microfilming equipment was directed by **Anthony A. Berlinsky**.

Publications planning, editing, composition, and printing procurement were performed in the Publications Services Division, under the direction of **Raymond J. Koski**, Acting Chief, by **Milton S. Andersen**, **Gerald A. Mann**, and **Wayne H. Massey**.

Important contributions were made by **Robert B. Voight** and **Sherry L. Courtland** in the planning and coordination of the 1970 census program; by **Lucille D. Catterton** in the planning of the tabular materials; and by **John W.H. Spencer**, **Sol Dolleck**, and **M. Douglas Fahey** in the systems design and operations for processing the census data.

GENERAL

This report presents statistics on the American Indian population, cross-classified by various social and economic characteristics for the United States, regions, selected States, standard metropolitan statistical areas, Indian tribes, and identified reservations. Selected housing characteristics also are given. The data are based on the 1970 Census of Population. Legal provision for this census, which was conducted as of April 1, 1970, was made in the Act of Congress of August 31, 1954 (amended August 1957), which codified Title 13, United States Code.

A major portion of the information compiled from the 1970 Census of Population appears in Volume I, **Characteristics of the Population**, which focuses on the presentation of data for States, counties, places, and other areas of the United States. The present report is part of Volume II, **Subject Reports**, wherein most reports concentrate on the presentation of national and regional data for a partic-

ular subject. A list of Volume II subject reports from the 1970 census is presented on page II. For a description of Volumes I and II, as well as other elements of the data dissemination program of the 1970 Population and Housing Census, see Appendix E, "Publication and Computer Summary Tape Program."

The content and procedures of the 1970 census were determined after evaluation of the results of the 1960 census, consultation with a wide variety of users of census data, and extensive field pretesting. A number of changes were introduced in 1970 to improve the usefulness of the census results. For the characteristics shown in this report, the changes do not, however, affect to any appreciable extent the comparability of the 1970 data with those for 1960.

More detailed information on the technical and procedural matters covered in the text of this report can be obtained by writing to the Director, Bureau of the Census, Washington, D.C. 20233. Such information will also appear in later reports of the 1970 census.

Organization of the text.—The text consists of this introduction and Appendixes A through E, which appear after the tables. The introduction contains information relating specifically to the principal subject of this report, including definitions of terms and a discussion of editing procedures. Appendix A provides general information concerning the presentation of data in this series of reports and the collection and processing procedures of the 1970 census. Appendix B describes the various area classifications (e.g., urban and rural residence, urbanized areas, etc.) and also explains the residence rules used in counting the population. Ap-

pendix C provides brief definitions and explanations of subjects covered in cross-classifications in this report and other reports in this series. Appendix D presents information on sources of error in the data, sampling variability, ratio estimation, and editing procedures. Appendix E summarizes the data dissemination program.

Content of the tables.—Table 1 presents data for the American Indian population classified by sex and urban-rural residence for the United States, regions, divisions, and States. Tables 2 through 10 contain data on characteristics such as age, family composition, marital status, school enrollment, employment status, occupation, income in 1969, and housing for the United States, regions, and selected States by urban-rural residence. In tables 11 through 15, statistics on social, economic, and housing characteristics are given for selected standard metropolitan statistical areas, Indian tribes, and identified reservations. Tables 16 and 17 show the age and sex distributions for all the reservations and tribes identified in the 1970 census. Table 18 presents a cross-classification of mother tongue by age and sex for all Indians and for those living on identified reservations.

Sample size.—The statistics in this report are based on a sample adjusted to represent the total population. Most data are based on a 20-percent sample of the population; data on place of birth, school enrollment, residence in 1965, selected housing equipment, and number of automobiles available are based on a 15-percent sample. (See "Data Collection Procedures" in Appendix A.) An explanation of the ratio estimation procedure and information

on the sampling variability associated with the data are contained in Appendix D.

RELATED MATERIALS

1970 census reports.—Statistics on the American Indian population are published in chapters B and D of 1970 Census of Population, Volume I, **Characteristics of the Population**. Population totals and sex distributions, based on complete-count data, are presented in chapter B for the United States, its regions, divisions, and States, standard metropolitan statistical areas (SMSA's), urbanized areas, places, and counties. Age, sex, and nativity statistics for States, based on the 15-percent sample, are shown in chapter D. Chapters B and D were originally published as paperbound reports in Series PC(1)-B, **General Population Characteristics**, and Series PC(1)-D, **Detailed Characteristics**, respectively.

Statistics on the American Indian population are found in other Volume II subject reports of the 1970 Census of Population, namely, PC(2)-3A, **Women by Number of Children Ever Born**; PC(2)-4C, **Marital Status**; PC(2)-5A, **School Enrollment**; PC(2)-5B, **Educational Attainment**; PC(2)-7A, **Occupational Characteristics**; PC(2)-9A, **Low-Income Population**; and PC(2)-9B, **Low-Income Areas in Large Cities**.

Data similar to those published in this report are also being published for other racial and ethnic groups in the following Volume II subject reports: PC(2)-1B, **Negro Population**; PC(2)-1C, **Persons of Spanish Origin**; PC(2)-1D, **Persons of Spanish Surname**; PC(2)-1E, **Puerto Ricans in the United States**; and PC(2)-1G, **Japanese, Chinese, and Filipinos in the**

United States. Statistics on the Korean and Hawaiian population will be included in the PC(2)-1G report; data on Aleuts and Eskimos in Alaska will be presented in a 1970 Census of Population Supplementary Report, Series PC(S1). Also, statistics will be presented in another PC(S1) report on the race of children of family heads cross-classified simultaneously by the race of the head and race of the wife, if any.

Reports from earlier censuses.—Information for 1960 on racial composition of the United States, regions, divisions, States, SMSA's, urbanized areas, cities, and counties were published in 1960 Census of Population, Volume I, **Characteristics of the Population**. Statistics on the social and economic characteristics of the American Indian population, based on a 25-percent sample, are presented in the 1960 Census of Population, Volume II, PC(2)-1C, **Nonwhite Population by Race**.

In the 1950 census, data on American Indians for States were published in Volume II, **Characteristics of the Population**. Data on social and economic characteristics of American Indians are presented in 1950 Census of Population, Volume IV, Part 3B, **Nonwhite Population by Race**, and in Volume IV, Part 5B, **Education**.

Unpublished data.—For most of the Volume II reports, statistics in addition to those published in the report are available on a reimbursable basis from computer tape files. Data shown for the United States as a whole are available for regions, divisions, and States, and, in a number of instances, the data for some characteristics were tabulated in greater detail than shown in the reports. Requests for unpub-

lished data, giving a specific description of the figures desired, should be made in writing to the Director, Bureau of the Census, Washington, D. C. 20233. Inquiries concerning unpublished data should be transmitted to the Bureau as soon as possible since tape files are not maintained indefinitely.

DEFINITIONS AND EXPLANATIONS OF PRINCIPAL SUBJECTS

The definitions and explanations below relate only to the principal subjects of this report. Brief definitions of other items that appear in cross-classifications in the tables of this report are presented in Appendix C.

Race

The data on the American Indian population were derived from question 4, on color or race, which was asked of all persons (see facsimile of questionnaire item below). In Alaska, "Aleut" and "Eskimo" were substituted for the categories "Korean" and "Hawaiian."

The concept of race as used by the Bureau of the Census does not denote any scientific definition of biological stock. Rather, it reflects self-identi-

4. COLOR OR RACE

<input type="radio"/> Negro or Black	<input type="radio"/> Filipino	<input type="radio"/> Other— <i>Print race</i>
<input type="radio"/> Indian (Amer.)	<i>Print tribe</i> →	

cation by respondents. Since the 1970 census obtained information on race primarily through self-enumeration, the data represent essentially self-classification by people according to the race with which they identify themselves. For persons of mixed parentage who were in doubt as to their classification, the race of the person's father was to be used. The population of the United States is classified by race into several categories listed in question 4. The "Other" category includes Malayan, Polynesian, Thai, etc.

American Indian

The category "American Indian" includes persons who indicated their race as "Indian (Amer.)," as well as persons who did not classify themselves in one of the specific race categories on the questionnaire but who reported the name of an Indian tribe or had such entries as "Mexican American-Indian," "Canadian-Indian," or "South American-Indian."

Tribal designation.—Persons who reported themselves as American Indian on the 1970 census questionnaire were asked to name their tribe. Tribal entries were coded according to a detailed list of tribes during the general coding operations of the 1970 census. The tribal code list was prepared by the Bureau of the Census, prior to the 1970 census, and reviewed for accuracy and completeness by the Bureau of Indian Affairs of the Department of the Interior and the Indian Health Service of the Department of Health, Education, and Welfare. Tribal classifications were based upon historic data, geographic location, and linguistic stock. The complete listing of all tribes identified in the 1970 census is shown in the list at the end of this

introduction.

Table 16 presents data by age and sex and whether living on reservations for all tribes identified in the census. Social and economic characteristics are shown in tables 11 through 15 for those tribes with at least 3,800 members, as reported in the 1970 census.

The 1970 census data on tribes may not be consistent with data from other sources such as the Bureau of Indian Affairs or the Indian Health Service. One of the major reasons for differences is that census data are based on self-identification, whereas statistics from other sources may be based on tribal enrollment. Persons whose names appear on tribal rolls may classify themselves as of some race other than Indian in the census, such as white or Negro. An additional major reason is that in the census, about 20 percent of the Indian population did not report any tribal affiliation.

The 1970 census statistics on tribes are not directly comparable to those collected in the 1910 and 1930 censuses because of differences in methods of enumeration and classification procedures.

Indian reservations.—In this report, data on reservations include only the 115 reservations identified for the 1970 census by the Bureau of the Census in conjunction with the Bureau of Indian Affairs. Maps showing the reservation boundaries were provided by the Bureau of Indian Affairs. Census enumeration districts, identified by the Bureau of the Census, were used as basic units for tabulating data for reservations. Table 17 presents the complete listing of the 115 reservations identified in the 1970 census. These reservations comprise about half of all reservations in the United States. Generally, reservations with smaller

populations, including the Alaskan Native Villages, were not identified for the 1970 census by the Bureau. Thus, the 1970 census data for Indians living on identified reservations do not represent all Indians living on reservations. Social and economic data for identified reservations with 2,300 Indians or more, according to the results of the census, are shown in tables 11 through 15.

Data for Indians living on specific reservations may not be consistent with those from other sources, such as the Bureau of Indian Affairs, because the census count of Indians on reservations includes only Indians living within reservation boundaries as of April 1, 1970. Some American Indians live only a part of the year on reservations; those persons living outside reservations on April 1, 1970, were counted at their other place of residence. Indians living in communities adjacent to reservations or on trust lands outside reservations were excluded from the census count of the reservation population.

Special Edit and Allocation Procedures for Race

On the 1970 census questionnaire, respondents had the opportunity of indicating their racial identification by marking one of the eight circles indicating specific racial groups or by marking the "Other" circle and writing in their race. A considerable proportion of the respondents who marked the "Other" circle supplied specific write-in entries such as Mexican, Puerto Rican, Jamaican, etc. In the sample questionnaires, entries of this type were edited into the specific racial categories. The statistics presented in this report reflect the effects of this editing.

INTRODUCTION—Continued

In the processing of the complete-count data, the editing procedure described above was performed only for those enumeration districts in which the proportion of "Other" marks exceeded certain tolerances. Because of this partial editing of the complete-count data on race and the universal editing of the sample data on race, there was a substantial overstatement of the residual "Other races" category in the PC(1)-B publications. A comparison of the complete-count and the sample distributions of the population by race is presented in table I. The differences indicate that the additional corrective editing shifted a substantial number of persons from the residual "All other" to the "White" category. The differences also reflect the effects of sampling variability.

If the race entry was missing on the questionnaire for a member of a household, an answer was assigned in the computer according to the race of other household members using specific rules of precedence of relation-

ship. If race was not entered for anyone in the household, the race of the head of the preceding household was assigned. This procedure is a variation of the general allocation process described in Appendix D, "Accuracy of the Data."

Comparability With Other Data

1970 census complete count.—Table I shows that the number of American Indians as estimated from a sample is less than the complete count. The 20-percent sample figure for the United States is less than the complete count by 3.7 percent. For other geographic areas, differences can be greater or less. For a geographic area where the difference between the complete count and sample estimate of American Indians is substantial, the sample data can be improved by an adjustment performed as follows: Compute the ratio of the complete count to the sample count of American Indians for the geographic area.

Apply this ratio to the sample data. Derived numbers based on the sample such as percents, means, or medians should not be adjusted in this way. Complete counts for American Indians are found in chapter B, Volume I, **Characteristics of the Population.**

Earlier censuses.—American Indians were first enumerated as a separate group in the 1860 census. However, Indians in Indian territory or on reservations were not included in the official population count of the United States until 1890. Special enumeration of Indians to obtain information on tribes and ancestry was conducted as part of the 1910, 1930, and 1950 censuses.

The count of Indians, 1900 to 1970, is shown in table II. The unusual fluctuations in the count between censuses are largely a result of differing procedures used from census to census for classifying persons as Indians. In 1960 and 1970, information was obtained primarily through self-enumeration.

TABLE I. Comparison of Complete-Count and 20- and 15-Percent Sample Data on the Population by Race, for the United States: 1970

(Minus sign (-) denotes decrease)

Race	Complete count	20-percent sample			15-percent sample

INTRODUCTION—Continued

tion. Respondents had the opportunity to classify themselves with respect to race, but nonrespondents were interviewed by telephone or direct visit. Prior to 1960, classification was made on the basis of observation by enumerators who may not have identified Indians living off reservations.

In 1970, persons of mixed Indian and white or Negro descent were asked to report the race with which they identify themselves. For persons who were in doubt as to their classification, the race of the father was to be used. In the 1960 census, persons of mixed white and Indian ancestry were included in the Indian category if they were enrolled on an Indian tribal or agency roll or if they were regarded as Indians in their community. A common requirement for such enrollment was that the proportion of Indian ancestry should be at least one-

fourth. In 1960, persons of mixed American Indian and Negro descent were included as Indians only if the Indian ancestry predominated or if they were regarded as Indians in the community; mixtures of Indian and races other than white or Negro were classified according to the race of the father.

In 1950, persons of mixed Indian and white or Negro ancestry were included in the category "All other races." An attempt was made to identify and isolate these population groups in 1950, especially those in the eastern part of the United States. Generally, the number of such persons was small, except in North Carolina, which had a heavy concentration of this mixed racial population (notably in Robeson and surrounding counties). The large percentage increase (46.5) of Indians for the decade 1950-60 reflects, in part, this change in classifica-

tion. If the 1950 figure for the Indian population is adjusted to include the North Carolina mixed racial group, the 1950-60 increase is reduced to 36.1. Accordingly, the 1940-50 increase is raised from 3.5 to 11.4 percent.

In censuses prior to 1950, persons of mixed Indian and Negro or white descent were variously classified, sometimes as Indian and sometimes as Negro. In the censuses of 1910 and 1930, a special effort was made to include all persons of mixed Indian and white descent as Indian. The results of each of these two censuses show a substantial increase in the Indian population over the preceding censuses.

Limitations of the Data

The tribal classification list used to code write-in tribal entries on question 4 is subject to certain limitations. Historical information from the 1910 and 1930 censuses, geographic location, and linguistic stock were used to develop the basic classifications. Also, source materials were referenced, and resource persons outside the Bureau were consulted. It must be recognized that experts in the field have differing opinions concerning the classification of some tribes; current information on all tribes in the United States is unavailable in source materials. As a result, the 1970 detailed census code list may include a few tribes which existed historically but are extinct today. Undoubtedly, some tribes, especially those located in California and the northwestern section of the country, would have been classified differently by experts in the field. The Bureau plans further research to evaluate the 1970 census tribal code list.

TABLE II. American Indian Population of the United States: 1900 to 1970

(Changes in the growth of the American Indian population resulted in part from differences in procedures for classifying persons of mixed racial descent. Minus sign (—) denotes decrease)

Census year	American Indian population	Change from preceding census	
		Number	Percent
1970	792,730	269,139	51.4
1960	523,591	166,092	46.5
1950	357,499	12,247	3.5
1940	345,252	1,900	0.6
1930	343,352	98,915	40.5
1920	244,437	-32,490	-11.7
1910	276,927	39,731	16.8
1900	237,196
