GENERAL

This report presents statistics on State of birth and residence in 1970 for the native population of the United States. The data are based on the 1970 Census of Population. Legal provision for this census, which was conducted as of April 1, 1970, was made in the Act of Congress of August 31, 1954 (amended August 1957), which codified Title 13, United States Code.

A major portion of the information compiled from the 1970 Census of Population appears in Volume I, **Characteristics of the Population**, which focuses on the presentation of data for States, counties, places, and other areas of the United States. The present report is part of Volume II, **Subject Reports**, wherein most reports concentrate on the presentation of national and regional data for a particular subject. For a description of Volumes I and II, as well as other elements of the data dissemination program of the 1970 Population and Housing Census, see Appendix E, "Publication and Computer Summary Tape Program."

The content and procedures of the 1970 census were determined after evaluation of the results of the 1960 census, consultation with a wide variety of users of census data, and extensive field pretesting. A number of changes were introduced in 1970 to improve the usefulness of the census results. For the characteristics shown in this report, the changes do not, however, affect to any appreciable extent the comparability of the 1970 data with those for 1960.

More detailed information on the technical and procedural matters covered in the text of this report can be obtained by writing to the Director, Bureau of the Census, Washington, D.C. 20233. Such information will also appear in later reports of the 1970 census.

Organization of the text.—The text consists of this introduction and Appendixes A through E, which appear after the tables. The introduction contains information relating specifically to the principal subject of this report, such as definitions of terms and editing procedures. Appendix A provides general information concerning the presentation of data in this series of reports and the collection and processing procedures of the 1970 census. Appendix B describes the various area classifications (e.g., urban and rural residence, urbanized areas, etc.) and also explains the residence rules used in counting the population. Appendix C provides brief definitions and explanations of subjects covered in cross-classifications in this report and other reports in this series. Appendix D presents information on sources of error in the data, sampling variability, ratio estimation, and editing procedures. Appendix E summarizes the data dissemination program.

Content of the tables.—This report consists of five major blocks of tables. Tables 1 through 12 present summary data comparing State or region of birth and State or region of residence in 1970 according to age and sex for the total, white, Negro, and Spanish-origin populations. Tables 13 through 21 show State of birth cross-classified with State of 1970 residence for the total, white, Negro, and Spanish-origin populations by sex. Tables 22 through 28 provide data on State of residence in 1970 cross-classified with division of birth according to age and sex for the total, white, and Negro populations. Tables 29 through 35 are the complements of tables 22 through 28 in that they present statistics on State of birth by division of residence in 1970 by age, sex, and race. The data in tables 22 through 35 can be rearranged to show the same categories of age, sex, and race as used in the 1960 report on **State of Birth.** Tables 36 and 37 provide information on the number of persons born in States other than their 1970 residence for various size-of-place categories and for individual standard metropolitan statistical areas.

Sample size.—The statistics presented in this report are based on a 5-percent sample adjusted to represent the total population. An explanation of the ratio estimation procedure and information on the sampling variability associated with the data are contained in Appendix D. Because the questions on national origin used in the 5- and 15-percent samples were different, the data in this report show a lower number of persons born abroad of American parents than that given in the Volume I reports.

RELATED MATERIALS

1970 census reports.—The reports in Volume I of the 1970 Census of

Population, **Characteristics of the Population,** contain statistics on State of birth, residence in 1965, and year moved into present house for each State. State of birth and residence in 1965 are also shown for the urban and rural parts of each State, for standard metropolitan statistical areas, urbanized areas, places, and counties. These data are summed to national and regional totals in the Volume I, United States Summary report.

Volume II report PC(2)-2E, **Migration Between State Economic Areas,** presents data on inmigrants and outmigrants by age and sex for each of the 510 State economic areas (SEA's) into which the country is divided and a 510-by-510 matrix of SEA of residence in 1965 by SEA of residence in 1970.

Reports from earlier censuses.—Like the 1970 census, the 1960 census contains questions on place of birth and residence 5 years prior to the census date. An approach similar to that used in 1970 was followed in the publication of migration data from the 1960 census. The Volume I State reports present data on place of birth, mobility status, and year moved into present house for States, by urban and rural residence, standard metropolitan statistical areas (SMSA's), urban places of 10,000 or more, and counties. More detailed data are given in the Volume II reports PC(2)-2A, **State of Birth;** PC(2)-2B, **Mobility for States and State Economic Areas;** PC(2)-2C, **Mobility for Metropolitan Areas;** PC(2)-2D, **Lifetime and Recent Migration;** and PC(2)-2E, **Migration Between State Economic Areas.** Additional statistics on the mobility of the population are included in a few other 1960 PC(2) and PC(3) reports.

Unpublished data.—For most of the Volume II reports, statistics in addition to those published in the report are available on a reimbursable basis from computer tape files. Data shown for the United States as a whole are available for regions, divisions, and States, and, in a number of instances, the data for some characteristics were tabulated in greater detail than shown in the reports. Requests for unpublished data, giving a specific description of the figures desired, should be made in writing to the Director, Bureau of the Census, Washington, D.C. 20233. Inquiries concerning unpublished data should be transmitted to the Bureau as soon as possible since tape files are not maintained indefinitely.

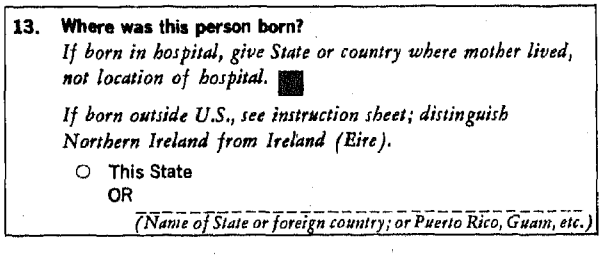
DEFINITIONS AND EXPLANATIONS OF PRINCIPAL SUBJECTS

The definitions and explanations below relate only to the principal subjects of this report. Brief definitions of other items that appear in cross-classifications in the tables of this report are presented in Appendix C.

Place of birth.—The statistics on place of birth were derived from answers to question 13 which was asked of all persons in the 15-percent and 5-percent samples (see facsimile of questionnaire item below). For persons reporting a birthplace outside the United States, additional questions were asked to determine whether they were born abroad of native parents.

Data on the State of birth of the native population have been collected in each census beginning with that of 1850. For the more recent censuses, State of birth has been published for the native population of the urban, rural-nonfarm, and rural-farm parts of States, and of individual cities above a specified minimum size. In this report, the native population is classified into the following groups: persons born in the State in which they were residing at the time of the census; persons born in a different State; persons born in Puerto Rico or in an outlying area of the United States; persons born abroad of American parents or at sea; and persons whose State of birth was not reported. Persons born in outlying areas include those born in American Samoa, Guam, Canal Zone, Virgin Islands, Midway Island, and Wake Island. Respondents were instructed to report place of birth in terms of the mother's usual State of residence at the time of the birth rather than in terms of the location of the hospital if the birth occurred in a hospital.

The statistics on State of birth are of value mainly for the information they provide on the historic movements of the native population from one State to another within the United States from the time of birth to the date of the census. The statistics afford no indication of the amount of migration within a given State; nor do



13. **Where was this person born?**
If born in hospital, give State or country where mother lived, not location of hospital.
If born outside U.S., see instruction sheet; distinguish Northern Ireland from Ireland (Eire).
○ This State
OR
(Name of State or foreign country; or Puerto Rico, Guam, etc.)

they take any account of intermediate moves between the time of a person's birth and the time of the census.

Foreign-born persons were asked to report their country of birth according to international boundaries as recognized by the United States government on April 1, 1970. Since numerous changes in boundaries of foreign countries have occurred in the last century, some foreign-born persons may have reported their country of birth in terms of boundaries that existed at the time of their birth or emigration, or in accordance with their own national preference.

Contiguous and noncontiguous States.—For persons who are living in a different State from the State of their birth, the data in some tables indicate whether the interstate move occurred between contiguous or noncontiguous States. For a given State, contiguous States are those with which it shares a common boundary. The contiguous States for each State are shown below.

Alabama	Fla., Ga., Miss., Tenn.
Alaska	None
Arizona	Calif., Colo., Nev., N. Mex., Utah
Arkansas	La., Miss., Mo., Okla., Tenn., Tex.
California	Ariz., Nev., Oreg.
