### BUREAU OF THE CENSUS

**George Hay Brown**, Director  
**Robert L. Hagan**, Deputy Director  
**Conrad Taeuber**, Associate Director for Demographic Fields  
**Daniel B. Levine**, Associate Director for Demographic Operations  
**David L. Kaplan**, 1970 Census Coordinator

### POPULATION DIVISION

**Meyer Zitter**, Acting Chief

**ACKNOWLEDGMENTS**—Many persons participated in the various activities of the 1970 census. Primary direction of the program was performed by **Conrad Taeuber**, Associate Director for Demographic Fields, assisted by **David L. Kaplan**, 1970 Census Coordinator, and in conjunction with **Paul R. Squires**, Associate Director for Data Collection and Processing, and **Joseph Waksberg**, Associate Director for Statistical Standards and Methodology.

This report was planned and its content developed in the Population Division by **Larry H. Long** of the Demographic Statistics Branch. **Elizabeth A. Larmon** assisted in the preparation of the textual materials. The work was directed by **Paul C. Glick**, Assistant Division Chief, and **Charles P. Brinkman**, Chief of the Demographic Statistics Branch, and was under the general supervision of **Meyer Zitter**, Acting Division Chief. Important contributions to the determination of the content of the PC(2) series of reports were made by a number of advisory groups and individuals representing or affiliated with universities, research organizations, professional associations, government agencies, and other groups.

The procedures for sample selection, sample weighting, and computation of sampling variances were developed in the Statistical Methods Division, under the supervision of **Morton Boisen**, Acting Chief, and **Robert H. Hanson**, Assistant Division Chief assisted by **William T. Alsbrooks**, **Peter A. Bounpane**, **Barbara A. Boyes**, and **Carlton W. Pruden**.

Geographic plans and procedures were developed in the Geography Division under the supervision of **William T. Fay**, then Chief, and **Robert C. Klove** and **Gerald J. Post**, Assistant Division Chiefs.

Data collection activities were administered by the Field Division, **Richard C. Burt**, Chief, and **Dean H. Weber**, Assistant Division Chief, with the assistance of the directors of the Bureau's data collection centers.

Systems and processing procedures were developed under the direction of **Morris Gorinson**, Assistant Chief, Demographic Census Staff. **Florence Wright**, assisted by **John F. Powell** and **Orville M. Slye**, was responsible for the clerical procedures and **Roger O. Lepage**, assisted by **Stephen E. Goldman**, **Howard N. Hamilton**, **Richard R. Warren**, and **Carol Schlechten**, was responsible for the computer programming. **Donald R. Dalzell** was responsible for the computer procedures and programs used for the electronic preparation of the tables in this report.

The manual processing and microfilming of the questionnaires and the review of tabulation controls were performed in the Data Preparation Division (formerly Jeffersonville Census Operations Division), under the direction of **Robert L. Hagan**, then Chief, with the assistance of **Rex L. Pullin**. The manual coding operations were supervised by **John C. Campbell**, assisted by **Herbert J. Hough**, **Joe D. Kolb**, and **Leo C. Schilling**. **William L. Pangburn** supervised the microfilming operation. **Dan N. Harding**, assisted by **Nora H. Shouse**, was responsible for the tabulation review work.

FOSDIC and computer processing were performed in the Computer Services Division under the supervision of **James R. Pepal**, Chief, and **E. Richard Bourdon** and **James W. Shores**, Assistant Division Chiefs. Development of the FOSDIC equipment

was directed by **William M. Gaines**, Assistant Division Chief, and **McRae Anderson**. Development of the automatic microfilming equipment was directed by **Anthony A. Berlinsky**.

Publications planning, editing, composition, and printing procurement were performed in the Publications Services Division, under the direction of **Raymond J. Koski**, Acting Chief, by **Milton S. Andersen**, **Gerald A. Mann**, and **Wayne H. Massey**.

Important contributions were made by **Robert B. Voight** and **Sherry L. Courtland** in the planning and coordination of the 1970 census program; by **Lucille D. Catterton** in the planning of the tabular materials; and by **John W. H. Spencer**, **Sol Dolleck**, and **M. Douglas Fahey** in the systems design and operations for processing the census data.

## GENERAL

This report presents statistics on the movement of persons 5 years old and over between State economic areas during the period 1965 to 1970. The 510 State economic areas into which the United States is divided are subdivisions of States, consisting of single counties or groups of counties having similar social and economic characteristics.

The data were obtained from a question on residence on April 1, 1965, asked in the 1970 Census of Population, which was conducted as of April 1, 1970. Legal provision for this census was made in the Act of Congress of August 31, 1954 (amended August 1957), which codified Title 13, United States Code.

A major portion of the information compiled from the 1970 Census of Population appears in Volume I, *Characteristics of the Population*. For a description of Volume I, as well as other elements of the data dissemination program of the 1970 Population and Housing Census, see Appendix D, "Publication and Computer Summary Tape Program."

The content and procedures of the 1970 census were determined after evaluation of the results of the 1960 census, consultation with a wide variety of users of census data, and extensive field pretesting. A number of changes were introduced in 1970 to improve the usefulness of the census results. For the characteristics shown in this report, the changes do not, however, affect to any appreciable extent the comparability of the 1970 data with those for 1960.

More detailed information on the technical and procedural matters covered in the text of this report can be obtained by writing to the Director, Bureau of the Census, Washington, D.C. 20233. Such information will also appear in later reports of the 1970 census.

**Organization of the text.**—The text consists of this introduction and four appendixes which appear after the tables. Appendix A describes the various area classifications (e.g., State economic areas) and also explains the residence rules used in counting the population. Appendix B provides definitions and explanations for the subjects covered in this report. Appendix C presents information on sources of error in the data, sampling variability, ratio estimation, and editing procedures. Appendix D summarizes the data dissemination program of the 1970 census.

**Content of the tables.**—Table 1 shows the general mobility status of the 1970 population 5 years old and over in terms of movement within and to each State economic area (SEA). Table 2 shows the number of immigrants (from other parts of the United States) and outmigrants (to other parts of the United States) for each SEA according

to age and sex, and table 3 presents the same information for Negro migrants to and from SEA's having a Negro population of 25,000 or more in 1970. Table 4 presents a 510-by-510 matrix showing SEA of residence in 1965 by SEA of residence in 1970 for persons 5 years old and over moving between SEA's. Table 5 shows the number of Negro immigrants 5 years old and over to each of the SEA's as shown in table 3, according to State of residence in 1965 and whether 1965 residence was in a metropolitan or nonmetropolitan SEA.

Since the focus of this report is on detailed streams of migration, the only characteristics shown for migrants are age, sex, and race. Extensive cross-tabulation of social and economic characteristics and family relationships of various classes of migrants will be presented in the other migration reports of the 1970 Census of Population.

**Sample size.**—The statistics presented in this report are based on a 15-percent sample inflated to represent the total population. An explanation of the ratio estimation procedure and information on the sampling variability associated with the data are contained in Appendix C.

**Symbols.**—A dash "—" signifies zero.

## RELATED MATERIALS

**1970 census reports.**—The Volume I reports contain statistics on State of birth, residence in 1965, and year moved into present house for each State. State of birth and residence in 1965 are also shown for the urban and rural parts of each State, for standard metropolitan statistical areas

(SMSA's), urbanized areas, urban places, and counties. These data are summed to national and regional totals in the Volume I United States summary report.

In addition to the present Volume II report, four others dealing specifically with migration are currently planned. PC(2)-2A, **State of Birth**, will present cross-tabulations of State of birth and State of residence in 1970 by age, sex, and ethnic group. PC(2)-2B, **Mobility for States and the Nation**, will present detailed cross-tabulations of general mobility status according to social and economic characteristics and family relationships; this report will also feature State-to-State movements of selected classes of migrants, including college students and persons in the Armed Forces in 1965 or 1970. PC(2)-2C, **Mobility for Metropolitan Areas**, will focus on the characteristics of persons moving to, from, and between metropolitan areas. PC(2)-2D, **Lifetime and Recent Migration**, will present three-way cross-tabulations of State of birth, State of residence in 1965, and State of residence in 1970. Various other reports in the Volume II series will also contain data on migration of the population.

The migration for each State economic area, as given in the present report, may be related to the social and economic characteristics of each SEA, presented in PC(2)-10B, **State Economic Areas**.

**1960 census reports.**—Like the 1970 census, the 1960 census contained a question on residence 5 years prior to the census date. An approach similar to that used in 1970 was followed in the publication of migration data from the 1960 census. The Volume I State reports presented data on mobility

status and year moved into present house for States, by urban and rural residence, standard metropolitan statistical areas (SMSA's), urbanized areas, urban places of 10,000 or more, and counties. More detailed data were given in the Volume II reports PC(2)-2A, **State of Birth**, PC(2)-2B, **Mobility for States and State Economic Areas**, PC(2)-2C, **Mobility for Metropolitan Areas**, PC(2)-2D, **Lifetime and Recent Migration**, and PC(2)-2E, **Migration Between State Economic Areas**. Additional statistics on the mobility of the population were included in a few other PC(2) and PC(3) reports.

**Reports for earlier censuses.**—In both the 1950 and 1940 censuses, a number of special reports on mobility of the population were published. The statistics for 1950 related to residence 1 year earlier, rather than 5 years earlier; those for 1940 related to a 5-year period but differed somewhat in other respects from the 1960 and 1970 statistics.

**Current Population Survey.**—Sample data on mobility during the preceding year have been collected annually since 1948 in the Current Population Survey and have been published mostly in Series P-20, "Population Characteristics." Earlier surveys at irregular intervals covered other periods back to 1940.

**Estimates of net migration.**—For each of 3,141 counties or county equivalents, the Census Bureau has estimated net migration over the 1960-70 decade. These estimates were prepared by the "residual method"—that is, population change due to natural increase (the difference between births and deaths) was subtracted from total

population change over the decade, leaving a residual population change due to net migration. The residual method, therefore, includes the net effect of immigration and emigration, whereas the data in this report refer only to movement within the United States. The estimates of intercensal net migration for counties were published in U.S. Bureau of the Census, Series P-25, "Population Estimates and Projections," No. 461, **Components of Population Change by County: 1960 to 1970**. Since State economic areas are made up of whole counties, the estimates of 1960-70 net migration for counties could be combined into the SEA's shown in the present report. The counties or county equivalents making up each SEA are shown in Appendix A.

The components of population change (natural increase and net migration) for the central city (cities) and the area outside the central city (cities) were estimated for each standard metropolitan statistical area. These data were published in U.S. Bureau of the Census final report PHC(2)-1, **Census of Population and Housing: 1970, General Demographic Trends for Metropolitan Areas, 1960 to 1970, United States Summary**.

The residual method of estimating net intercensal migration is not used to estimate net migration by age. In the past, however, census survival rates have been used to estimate net migration by age for counties and State economic areas.<sup>1</sup>

<sup>1</sup>See, for example, Economic Research Service, U.S. Department of Agriculture (in cooperation with Research Foundation, Oklahoma State University, and Area Redevelopment Administration, U.S. Department of Commerce), **Net Migration of the Population, 1950 to 1960, by Age, Sex, and Color—States, Counties, Economic Areas, and Metropolitan Areas**, by Gladys K. Bowles and James D. Tarver, Population-Migration Report, Vol. 1, 1965.

### DATA COLLECTION PROCEDURES

The 1970 census was conducted primarily through self-enumeration. In 1960, self-enumeration was first introduced on a nationwide scale as a substitute for the traditional census direct interview.

A census questionnaire was delivered by postal carriers to every household several days before Census Day, April 1, 1970. This questionnaire contained certain explanatory information and was accompanied by an instruction sheet; in areas with comparatively large proportions of Spanish-speaking persons, a Spanish version of the instruction sheet was also enclosed. (Facsimiles of the 1970 census questions and instructions to respondents are included in the Volume I reports.)

In the larger metropolitan areas and some adjacent counties, altogether containing about three-fifths of the population of the United States, the householder was requested to fill out and mail back the form on Census Day. Approximately 87 percent of the householders returned their forms by mail. The mailed-back forms were reviewed by the census enumerator (or, in some localities, a census clerk) and if the form was determined to be incomplete or inconsistent, a followup was made. The bulk of these followups were made by telephone, the rest by personal visit. For the households which did not mail back their forms, a followup was also made, in almost all cases by personal visit and in the remainder by telephone.

For the remaining two-fifths of the population, the householder was requested to fill out the form and give it to the enumerator when he called; approximately 80 percent did so. Incomplete and unfilled forms were completed by interview during the enumerator's visit.

Three types of questionnaires were used throughout the country; 80 percent of the households answered a form containing a limited number of population and housing questions and the remainder, split into 15-percent and 5-percent samples, answered forms which contained these questions as well as a number of additional questions. Some of the additional questions were the same on the 15-percent and 5-percent versions; others were different. A random procedure was used to determine which of the three forms any particular household answered.

In the metropolitan and adjacent areas, the designated type was sent to each household. In the remaining areas, the questionnaire with a limited number of questions was distributed to all households, and the enumerators interviewed for the additional questions in those households designated for the 15-percent and 5-percent samples. The subjects covered in this report are all drawn from the 15-percent questionnaires.

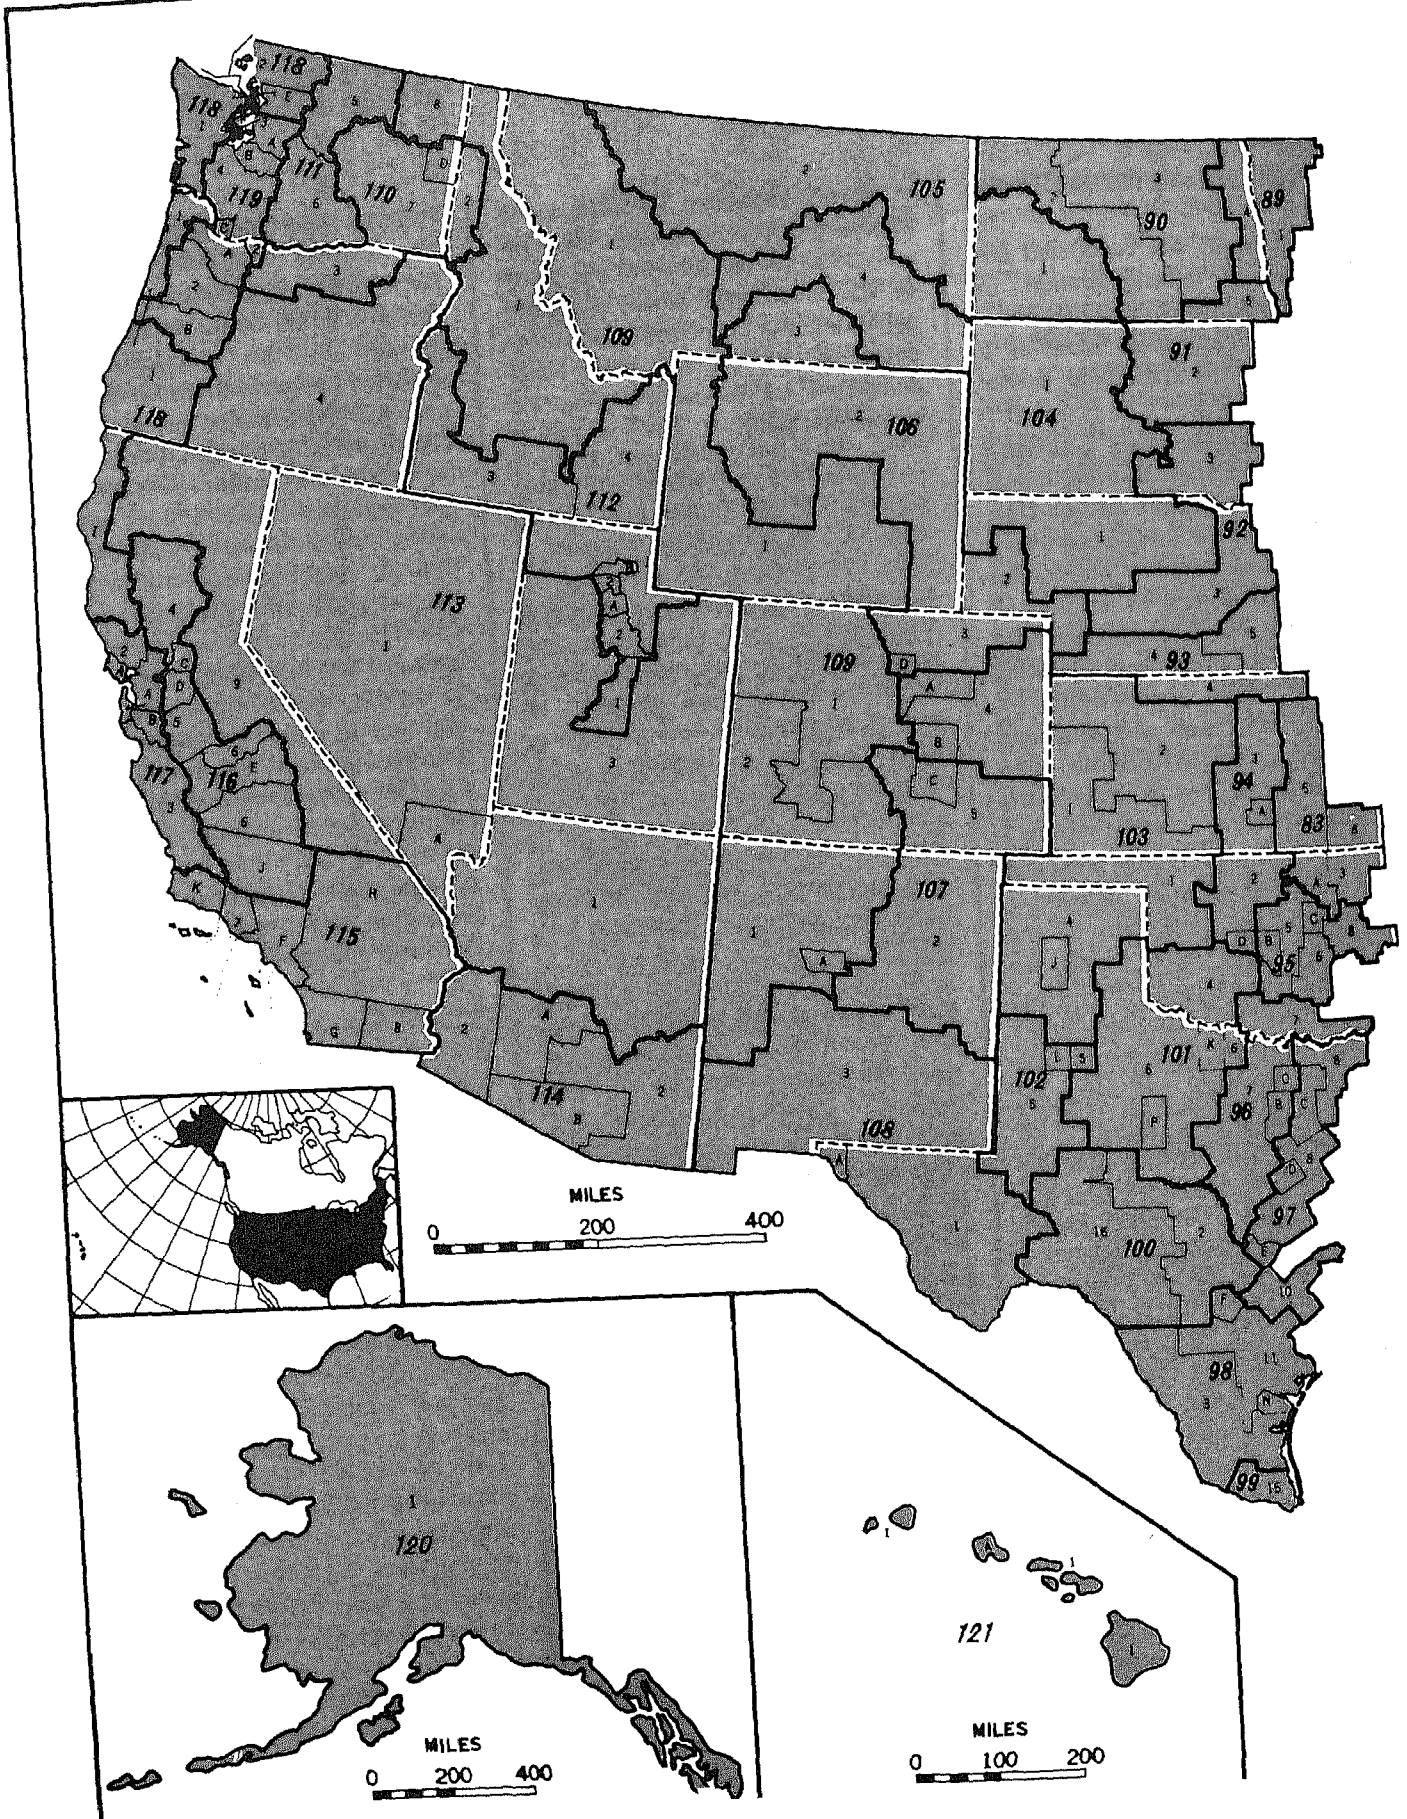

### PROCESSING PROCEDURES

The 1970 census questionnaires were specially designed to be processed by

FOSDIC (Film Optical Sensing Device for Input to Computer). For most items on the questionnaire, the information supplied by the respondent or obtained by the enumerator was indicated by marking the answers in predesignated positions that would be "read" by FOSDIC from a microfilm copy of the questionnaire onto computer magnetic tape with no intervening manual processing. Some items, however, required reviewing written entries to determine the proper code. Consequently, the processing involved a manual coding and editing operation in which clerks determined the appropriate codes and marked the specified positions on the questionnaire; for example, the clerks applied a 5-digit numerical code for county of residence in 1965. These marks as well as those made by the respondent and enumerator were read by FOSDIC onto magnetic tape.

The tape containing the information from the questionnaires was processed on the Census Bureau's computers through a number of editing and tabulation steps (see Appendix C, "Accuracy of the Data"). One of the end results of this operation was a computer tape from which the tables in this report were prepared on a cathode-ray-tube phototype-setting machine at the Government Printing Office. Another end result was the summary tapes which are available for purchase, as described in Appendix D, "Publication and Computer Summary Tape Program."

# Economic Subregions and State Economic Areas: 1970

**LEGEND**
