GENERAL

This report presents detailed statistics for the United States and regions on the educational attainment of the population 14 years old and over in terms of years of school completed classified by various demographic, social, and economic characteristics. The statistics are based on the 1970 Census of Population. Legal provision for this census, which was conducted as of April 1, 1970, was made in the Act of Congress of August 31, 1954 (amended August 1957), which codified Title 13, United States Code.

A major portion of the information compiled from the 1970 Census of Population appears in Volume I, **Characteristics of the Population**, which focuses on the presentation of data for States, counties, places, and other areas of the United States. The present report is part of Volume II, **Subject Reports**, wherein most reports concentrate on the presentation of national and regional data for a particular subject. For a description of Volumes I and II, as well as other elements of the data dissemination program of the

1970 Population and Housing Census, see Appendix E "Publication and Computer Summary Tape Program."

The content and procedures of the 1970 census were determined after evaluation of the results of the 1960 census, consultation with a wide variety of users of census data, and extensive field pretesting. A number of changes were introduced in 1970 to improve the usefulness of the census results. For the characteristics shown in this report, the changes do not, however, affect to any appreciable extent the comparability of the 1970 data with those for 1960.

More detailed information on the technical and procedural matters covered in the text of this report can be obtained by writing to the Director, Bureau of the Census, Washington, D.C. 20233. Such information will also appear in later reports of the 1970 census.

Organization of the text.—The text consists of this introduction and Appendixes A through E, which appear after the tables. The introduction contains information relating specifically to the principal subject of this report, such as editing procedures and definitions of terms. Appendix A provides general information concerning the presentation of data in this series of reports and the collection and processing procedures of the 1970 census. Appendix B describes the various area classifications (e.g., urban and rural residence, urbanized areas, etc.) and also explains the residence rules used in counting the population. Appendix C provides brief definitions and explanations of subjects covered in cross-classifications in this report and other reports in this series. Appendix D presents information on sources of error in the data, sampling

variability, ratio estimation, and editing procedures. Appendix E summarizes the data dissemination program.

Content of the tables.—Tables 1 to 11 present cross-classifications of years of school completed by characteristics such as ethnic origin, marital status, labor force status, occupation, and income. Statistics are shown for regions and by type of residence; i.e., urban and rural and inside or outside central cities of urbanized areas. To facilitate comparisons of changes in the social and economic characteristics over time, all tables in this report show years of school completed cross-classified by age.

Sample size.—The statistics in this report are based on a sample inflated to represent the total population. Table 1 is based on the 15-percent sample and the remaining tables are based on the 5-percent sample (see "Data Collection Procedures" in Appendix A). The figure for a given characteristic in table 1, e.g., the population with 1 to 3 years of high school, may differ from the corresponding figure in other tables because of sampling variability. An explanation of the ratio estimation procedure and information on the sampling variability associated with the data are contained in Appendix D.

RELATED MATERIALS

1970 census reports.—Statistics on years of school completed, based on a 20-percent sample, are presented for the United States, regions, divisions, States, standard metropolitan statistical areas, urbanized areas, places of 2,500 or more, and counties in chapters C and D of 1970 Census of

Population Volume I, **Characteristics of the Population**. The statistics in chapter D, which are shown for only the larger areas, include cross-classifications of years of school completed by age and other social and economic characteristics. Most of the statistics in chapter C are for persons 25 years old and over; and those in chapter D, for persons 14 years old and over. Part 1 of Volume I includes these two chapters for the United States as a whole; the remaining parts of Volume I are for each State, the District of Columbia, Puerto Rico, and selected outlying areas. Chapters C and D were originally published as paper-bound Series PC(1)-C reports, **General Social and Economic Characteristics**, and Series PC(1)-D reports, **Detailed Characteristics**.

Statistics on educational attainment of the population 25 years old and over are also shown in the reports for census tracts of large cities and adjacent areas. These data are presented for 241 standard metropolitan statistical areas in the 1970 Censuses of Population and Housing, **Census Tracts**, Series PHC(1).

In addition to the present report, two other reports planned for Volume II concentrate on subjects relating to education, namely, school enrollment and vocational training. Most of the Volume II reports on other subjects include cross-classifications by educational characteristics.

Reports from earlier censuses.—In the 1960 census reports, data on educational attainment from a 5-percent sample, cross-classified by most of the characteristics shown in this report, were published in 1960 Census of Population, Volume II, **Subject Reports**, PC(2)-5B, "Educational Attainment." Data on years of school com-

pleted, based on a 25-percent sample of the population, for regions, divisions, States, standard metropolitan statistical areas, cities, and counties were published in 1960 Census of Population, Volume I, **Characteristics of the Population**. Statistics on educational attainment of the population 25 years old and over were also shown in the reports for census tracts of large cities and adjacent areas. These data are presented, for 180 areas, in 1960 Censuses of Population and Housing, **Census Tracts**, Series PHC(1). Additional statistics on educational attainment are included in most of the other Volume II reports of the 1960 Census of Population.

In the 1950 census reports, data on years of school completed, based on a 20-percent sample of the population, for regions, divisions, States, standard metropolitan statistical areas, urbanized areas, cities, and counties were published in 1950 Census of Population, Volume II, **Characteristics of the Population**, and for census tracts in Volume III, **Census Tract Statistics**. Data on educational attainment from a 3 1/3 percent sample, cross-classified by many of the characteristics shown in this report, were published in a report entitled "Education," which was Part 5B of Volume IV, **Special Reports**, of the 1950 Census of Population reports; additional data on educational attainment, cross-classified by various subjects, were part of other special reports in Volume IV.

Current Population Survey.—Data on educational attainment for the United States as a whole are collected regularly and published annually by the Bureau of the Census through its Current Population Survey (CPS). Data on educational attainment for selected standard metropolitan statisti-

cal areas for the population 25 years old and over based on the Current Population Survey are published periodically by the Bureau of the Census. The CPS is a nationwide survey, covering a sample of about 50,000 households. These data are published in **Current Population Reports**, Series P-20. Statistics on educational attainment by income are shown in the Series P-60 reports, and those on the educational attainment of the labor force are published in **Special Labor Force Reports** issued by the Bureau of Labor Statistics, U.S. Department of Labor. (For a statement on the comparability of CPS and census data on years of school completed, see the paragraphs on "Comparability with Other Data" in the section on "Definitions and Explanations of Principal Subjects.")

Data on illiteracy, in terms of inability to read and write in any language, are collected occasionally through the CPS and are published in the Series P-20 reports. Estimates of illiteracy for the United States as of November 1969 are shown in Series P-20, No. 217.

Projections to future years of the educational attainment of the population are prepared at intervals by the Census Bureau and published in **Current Population Reports**, Series P-25.

Unpublished data.—For most of the Volume II reports, statistics in addition to those published in the report are available on a reimbursable basis. For example, data shown for the United States as a whole are available for regions, divisions, and States. Data shown for selected types of residence (e.g., rural) may be available for all types of residence; and statistics shown for broad age groups may be

INTRODUCTION—Continued

available in greater age detail. Requests for unpublished data, giving a specific description of the figures desired, may be made by writing to the Director, Bureau of the Census, Washington, D.C. 20233. Inquiries concerning unpublished data should be transmitted to the Bureau as soon as possible because tape files are not maintained indefinitely.

DEFINITIONS AND EXPLANATIONS OF PRINCIPAL SUBJECTS

The definitions and explanations below relate only to the principal subjects of this report. Brief definitions of other items that appear in cross-classifications in the tables of this report may be found in Appendix C.

Years of School Completed

The data on years of school completed were derived from answers to questions 21 and 22 (see facsimiles of questionnaire items below).

“Regular” schooling.—According to the census definition, “regular” schooling refers to formal education obtained in public and private (denominational and nondenominational) kindergartens, elementary schools, high schools, colleges, universities, or professional schools, whether day or night school, and whether attendance was full time or part time; that is, “regular” schooling is that which may advance a person toward an elementary school certificate or high school diploma, or a college, university, or professional degree. Schooling that was not obtained in a regular school and schooling from a tutor or through correspondence courses were counted only if the credits obtained were regarded as transferable to a school in the regular school system.

These questions on educational attainment applied only to progress in “regular” schools, as defined above. Both questions were asked of persons in the 15-percent and 5-percent samples. In the present report, data on

educational attainment are shown for all persons 14 years old and over.

Highest grade of school attended.—The first question called for the highest grade attended, regardless of “skipped” or “repeated” grades. In some areas in the United States, the school system formerly had 11 years of school (7 years of elementary school and 4 years of high school) rather than the more conventional 12 years (8 years of elementary school and 4 years of high school, or equivalent years of elementary school, junior high school, and senior high school). Persons who had progressed beyond the 7th grade in this type of school system were treated as though they had progressed beyond the 8th grade of elementary school.

Persons whose highest grade of attendance was in a foreign school system, or in an ungraded school whose highest level of schooling was measured in “readers,” or whose training was received through a tutor were instructed to report the approximate equivalent grade in the regular United States school system.

Completion of grade.—The second question on educational attainment was used to determine whether the highest grade attended had been finished. It was to be answered “finished this grade (or year)” if the person had successfully completed the entire grade or year indicated in response to the previous question. If the person had completed only a half grade or semester, or had dropped out or failed to pass the last grade attended, the question was to be answered “did not finish this grade (or year).” If the person reported that he was currently enrolled in the grade or year, the question was to be answered “now

21. What is the highest grade (or year) of regular school he has ever attended?

Fill one circle. If now attending, mark grade he is in.

22. Did he finish the highest grade (or year) he attended?

- Now attending this grade (or year)
- Finished this grade (or year)
- Did not finish this grade (or year)

attending this grade (or year)." The number in each category of highest grade completed represents the combination of (a) persons who reported that they had attended the indicated grade and finished it, (b) those who had attended the next higher grade but had not finished it, and (c) those still attending the next higher grade. Persons who have not completed the first year of elementary school are classified as having no years of school completed.

Median Years of School Completed

The median number of school years completed was computed after the statistics on years of school completed had been converted to a continuous series of numbers (e.g., completion of the last year of high school was treated as completion of the 12th year and completion of the 1st year of college as completion of the 13th year). Persons completing a given school year were assumed to be distributed evenly within the interval from .0 to .9 of the year. In fact, at the time of the census enumeration, most of the enrolled persons had completed at least three-fourths of a school year beyond the highest grade completed, whereas a large majority of persons who were not enrolled had not attended any part of a grade beyond the highest one completed. The effect of the assumption is to place the median for younger persons slightly below, and for older persons slightly above, the true median.

The same procedure for computing this median has been used in the 1940, 1950, 1960, and 1970 censuses. Because of the inexact assumption as to the distribution within an interval, this median is more appropriately used for comparing different groups and the same group at different dates than as

an absolute measure of educational attainment.

Uses and Limitations of the Data

The data in this report may be used to study educational differences among groups classified by race, national origin, marital status, migration status, residence, labor force status, and economic status. One may analyze the association of education with occupational placement, the money value of education, the extent to which this value relates to the type of work performed, the educational distribution of unemployed persons as compared with the employed, the relative educational progress of white persons and persons of other races and its relation to economic status, and the like.

The data on educational attainment refer only to education obtained through "regular" schooling, as defined above. Many types of "nonregular" (formal and informal) schooling and training may contribute substantially to an individual's knowledge and skills. The statistics on educational attainment in the census are restricted to progress in "regular" schools for several reasons: (1) Nearly all persons in the country are required to attend "regular" schools and pursue fairly standardized courses of basic study. (2) "Regular" schools tend to be graded, with the result that a grade continuum for years of school completed can be shown and statistical comparisons can be made. (3) "Nonregular" types of schooling are varied and are difficult to define and to classify in enumeration under the conditions of a decennial census.

The quality associated with and the benefits accruing from a given amount of schooling have probably varied over

time and no doubt vary among areas of the country and among subgroups of the population. These differences can be accounted for partly by the relative adequacy of the school systems which persons have attended and the level of training they gave, and partly by the cultural, social, and psychological conditions under which persons in the different groups have lived.

Comparability with Other Data

Earlier censuses.—In 1940, when the first decennial census data on educational attainment were obtained, a single question was asked on highest grade of school completed. However, respondents frequently reported the grade or year in which they were enrolled, or had last been enrolled, instead of the one completed. The two-question approach used in 1950, 1960, and 1970 was designed to reduce this kind of error.

In the 1950 census, persons for whom highest grade attended was reported but for whom no report was made on finishing the grade were assumed to have finished the grade if they were at the compulsory school ages but not to have finished the grade if they were not at those ages. In the 1960 and 1970 censuses, nonresponses on both highest grade attended and completion of grade were eliminated by the procedure described under "Editing of Unacceptable Data," in Appendix D.

Current Population Survey.—A comparison of data from the 1970 census and the March 1970 Current Population Survey on years of school completed for persons 25 years old and over shows that the average educational level as given in the CPS in 1970 was about the same as that in the 1970

INTRODUCTION—Continued

census (see table I). For example, the median number of school years completed for the population 25 years old and over was 12.2 in the CPS and 12.1 in the census. There are, however, some differences in the distributions from the two sources. The CPS shows more persons having completed the terminal grade (or year) of a given level than does the census. For example, the March 1970 Current Population Survey shows that 13.4 percent of the population 25 years old and over had completed 8 years of elementary school and no more, as compared with 12.8 percent as shown

by the 1970 census 5-percent sample. Comparable figures for four years of high school and no more are 34.0 percent in the CPS and 31.0 percent in the 1970 census. For four years of college, the corresponding figures are 6.8 percent and 6.1 percent, respectively.

Some of the differences between the educational distributions from the two sources resulted from differences between the age distributions of the population obtained from the 1970 census and the corresponding estimates used in the CPS for March 1970. The population estimates by age in the

CPS were obtained by updating 1960 census figures; they excluded members of the Armed Forces living in military barracks and were different in certain other respects from census figures. The CPS figures included relatively more young persons who are generally better educated, on the average, and comparatively fewer older persons than the census. Another source of the difference in educational distributions may have been the method of enumeration. In the census, self-enumeration was used for a majority of the households, whereas in the CPS, direct enumeration was used exclusively.

INTRODUCTION—Continued

Quality of the Data

Information on the quality of data on educational attainment for 1970 is available from rates of allocation for nonresponse shown for the United States by metropolitan and nonmetropolitan residence in tables C-2 and C-3 of **General Social and Economic Characteristics PC(1)-C1, United States Summary**. Table C-2 of that report shows that 7.7 percent of the population 25 years old and over was allocated years of school completed—8.9 percent of the metropolitan population and 5.0 percent of the nonmetropolitan population.
