GENERAL

This report presents detailed statistics for the United States on the employment status and work experience of the population classified by various demographic, social, and economic characteristics. The statistics are based on the 1970 Census of Population. Legal provision for this census, which was conducted as of April 1, 1970, was made in the Act of Congress of August 31, 1954 (amended August 1957), which codified Title 13, United States Code.

A major portion of the information compiled from the 1970 Census of Population appears in Volume I, **Characteristics of the Population,** which focuses on the presentation of data for States, counties, places, and other areas of the United States. The present report is part of Volume II, **Subject Reports,** wherein most reports concentrate on the presentation of national and regional data for a particular subject. For a description of Volumes I and II, as well as other elements of the data dissemination program of the 1970 Population and Housing Census, see Appendix E, "Publication and Computer Summary Tape Program."

The content and procedures of the 1970 census were determined after evaluation of the results of the 1960 census, consultation with a wide variety of users of census data, and extensive field pretesting. A number of changes were introduced in 1970 to improve the usefulness of the census results. For the characteristics shown in this report, the changes do not, however, affect to any appreciable extent the comparability of the 1970 data with those for 1960.

More detailed information on the technical and procedural matters covered in the text of this report can be obtained by writing to the Director, Bureau of the Census, Washington, D.C. 20233. Such information will also appear in later reports of the 1970 census.

Organization of the text.—The text consists of this introduction and Appendixes A through E, which appear after the tables. The introduction contains information relating specifically to the principal subject of this report, such as definitions of terms and editing procedures. Appendix A provides general information concerning the presentation of data in this series of reports and the collection and processing procedures of the 1970 census. Appendix B describes the various area classifications (e.g., urban and rural residence, urbanized areas, etc.) and also explains the residence rules used in counting the population. Appendix C provides brief definitions and explanations of subjects covered in cross-classifications in this report and other reports in this series. Appendix D presents information on sources of error in the data, sampling variability, ratio estimation, and editing procedures. Appendix E summarizes the data dissemination program.

Content of the tables.—Tables 1 through 17 present statistics on the employment status of the population by such characteristics as age, race, sex, type of residence, household relationship, marital status, school enrollment, years of school completed, residence in 1965, family status, presence of own children, children ever born, and income in 1969. Tables 18 through 26 present statistics on weeks worked in 1969 by similar characteristics. Most tables are restricted to the population 16 years old and over, but some tables refer to the population 14 years old and over for purposes of historical comparison. Specifically, tables 2, 4, 5, 8, and 14 present historical data on labor force status, and tables 20 and 21 show historical data on weeks worked.

Sample size.—The statistics in this report are based on a sample adjusted to represent the total population. The 1970 data in all tables are based on the 5-percent sample, except tables 10 and 25, which are based on the 15-percent sample (see "Data Collection Procedures" in Appendix A). A figure for a given characteristic in tables 10 and 25, e.g., employed males or females who worked in 1969, may differ from the corresponding figure in other tables because of sampling variability. The historical data for 1960 and 1940 are based on a 5-percent sample, and the data for 1950 are based on a 3 1/3-percent sample. In tables showing historical data, derived figures are not shown where the base is less than 1,000 for 1960, 3,000 for 1950, or 2,000 for 1940. An explanation of the ratio estimation procedure and information on the sampling variability associated with the data are contained in Appendix D.

RELATED MATERIALS

1970 census reports.—Statistics on employment status and weeks worked, based on the 20-percent sample, are presented for the United States, regions, divisions, States, standard metropolitan statistical areas, urbanized areas, places of 2,500 or more, and counties in chapters C and D of the 1970 Census of Population, Volume I, **Characteristics of the Population.** The statistics in chapter D, which are shown for only the larger areas, include cross-classifications of employment status and weeks worked by various social and economic characteristics. Part 1 of Volume I includes these two chapters for the United States as a whole; the remaining parts of Volume I are for each State, the District of Columbia, Puerto Rico, and selected outlying areas. Chapters C and D were originally published as paperbound Series PC(1)-C reports, **General Social and Economic Characteristics,** and Series PC(1)-D reports, **Detailed Characteristics.** Statistics on employment status of the population are also shown for census tracts of 241 standard metropolitan statistical areas and selected adjacent areas in the 1970 Census of Population and Housing, **Census Tracts,** Series PHC(1).

Reports from earlier censuses.—In the 1960 census reports, data on employment status and weeks worked from a 5-percent sample, cross-classified by most of the characteristics shown in this report, were published in the 1960 Census of Population, Volume II, PC(2)-6A, **Employment Status and Work Experience.** Additional statistics on these subjects are included in most of the Volume II reports from the 1960 census. Data on employment status and weeks worked, based on a 25-percent sample of the population, for regions, divisions, States, standard metropolitan statistical areas, cities, and counties were published in 1960 Census of Population, Volume I, **Characteristics of the Population.** Statistics on employment status are also shown for census tracts of large cities and adjacent areas. These data are presented for 180 areas in 1960 Censuses of Population and Housing, **Census Tracts,** Series PHC(1).

Data for 1950 on employment status and work experience, based on a 3 1/3-percent sample, are presented in the 1950 Census of Population, Volume IV, Part 1A, **Employment and Personal Characteristics.** Data on these subjects from the 1950 census, based on a 20-percent sample of the population, for regions, divisions, States, standard metropolitan areas, urbanized areas, cities, and counties were published in the 1950 Census of Population, Volume II, **Characteristics of the Population,** and for census tracts in Volume III, **Census Tract Statistics.**

Current Population Survey.—Data on employment status are also collected by the Bureau of the Census through its Current Population Survey (CPS) and published monthly by the Bureau of Labor Statistics, U.S. Department of Labor, in the series **Employment and Earnings.** Data from CPS are also collected on annual work experience and published yearly by the Bureau of Labor Statistics in the series **Monthly Labor Review.** The statistics provided by the Current Population Survey are generally comparable with decennial census statistics.

Unpublished data.—For most of the Volume II reports, statistics in addition to those published in the report are available on a reimbursable basis from computer tape files. Data shown for the United States as a whole are available for regions, divisions, and States, and, in a number of instances, the data for some characteristics were tabulated in greater detail than shown in the reports. Requests for unpublished data, giving a specific description of the figures desired, should be made in writing to the Director, Bureau of the Census, Washington, D.C. 20233. Inquiries concerning unpublished data should be transmitted to the Bureau as soon as possible since tape files are not maintained indefinitely.

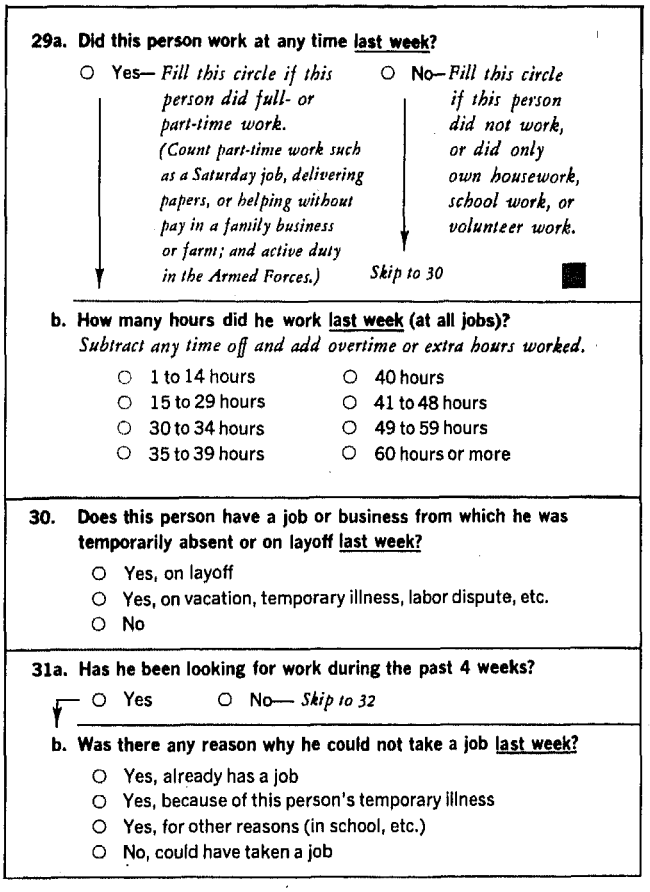
DEFINITIONS AND EXPLANATIONS OF PRINCIPAL SUBJECTS

The definitions and explanations below relate only to the principal subjects of this report. Brief definitions of other items that appear in cross-classifications in the tables of this report are presented in Appendix C.

Employment Status

The data on employment status were derived from answers to questions 29a, 29b, 30, and 31 (see facsimiles of questionnaire items below).

The series of questions on employment status were asked of all persons 14 years old and over in the 15- and 5-percent samples and were designed to identify, in this sequence: (a) persons who worked at any time during the reference week; (b) persons who did not work during the reference week but who had jobs or businesses from which they were temporarily absent (excluding layoff); (c) persons on layoff; and (d) persons who did not work during the reference week, but



29a. Did this person work at any time last week?

○ Yes— *Fill this circle if this person did full- or part-time work. (Count part-time work such as a Saturday job, delivering papers, or helping without pay in a family business or farm; and active duty in the Armed Forces.)*

○ No— *Fill this circle if this person did not work, or did only own housework, school work, or volunteer work.*

Skip to 30

b. How many hours did he work last week (at all jobs)?
Subtract any time off and add overtime or extra hours worked.

- ○ 1 to 14 hours
- ○ 15 to 29 hours
- ○ 30 to 34 hours
- ○ 35 to 39 hours
- ○ 40 hours
- ○ 41 to 48 hours
- ○ 49 to 59 hours
- ○ 60 hours or more

30. Does this person have a job or business from which he was temporarily absent or on layoff last week?

- ○ Yes, on layoff
- ○ Yes, on vacation, temporary illness, labor dispute, etc.
- ○ No

31a. Has he been looking for work during the past 4 weeks?

○ Yes ○ No— *Skip to 32*

b. Was there any reason why he could not take a job last week?

- ○ Yes, already has a job
- ○ Yes, because of this person's temporary illness
- ○ Yes, for other reasons (in school, etc.)
- ○ No, could have taken a job

who were looking for work during the past four weeks and were available for work during the reference week.

Most of the employment status data shown in this and other 1970 census reports relate to persons 16 years old and over. In 1940, 1950, and 1960, employment status data were presented for persons 14 years old and over. The change in the universe for 1970 was made to achieve conformity with the official measurement of the labor force as revised in January 1967. Selected employment status data, however, are shown for persons 14 and 15 years old and 14 years old and over.

Reference week.—Data on employment status refer to the calendar week prior to the date on which respondents completed their questionnaires or were interviewed by enumerators. Since the week of enumeration was not the same for all persons, the reference week for employment data is not entirely uniform. For many persons, the reference week for answering the 1970 census employment status questions was the last week in March. Good Friday occurred during this week, and some workers took time off for this occasion. The effect of this holiday on the 1970 census employment status data varies from area to area depending on the leave practices and time of census enumeration in the area. It is not likely that there was much effect on the overall measurement of employment since employment is based on the work activity during the entire week. The effect of the holiday on the statistics on hours worked should, however, be considered in any interpretation or other use of the data.

Employed.—Employed persons comprise all civilians 16 years old and over who were (a) "at work"—those who did any work at all as paid employees or in their own business or profession, or on their own farm, or who worked 15 hours or more as unpaid workers on a family farm or in a family business; or (b) were "with a job but not at work"—those who did not work during the reference week but had jobs or businesses from which they were temporarily absent due to illness, bad weather, industrial dispute, vacation, or other personal reasons. Excluded from the employed are persons whose only activity consisted of work around the house or volunteer work for religious, charitable, and similar organizations.

Unemployed.—Persons are classified as unemployed if they were civilians 16 years old and over and: (a) were neither "at work" nor "with a job but not at work" during the reference week, (b) were looking for work

during the past 4 weeks, and (c) were available to accept a job. Examples of jobseeking activities are: (1) registering at a public or private employment office, (2) meeting with prospective employers, (3) checking with friends or relatives, (4) placing or answering advertisements, (5) writing letters of application, and (6) being on a union or professional register.

Also included as unemployed are persons who did not work at all during the reference week and were waiting to be called back to a job from which they had been laid off.

Civilian labor force.—The civilian labor force consists of persons classified as employed or unemployed in accordance with the criteria described above.

Labor force.—The labor force includes all persons classified in the civilian labor force plus members of the Armed Forces (persons on active duty with the United States Army, Air Force, Navy, Marine Corps, or Coast Guard).

Not in labor force.—All persons 16 years old and over who are not classified as members of the labor force are defined as "not in labor force." This category consists mainly of students, housewives, retired workers, seasonal workers enumerated in an "off" season who were not looking for work, inmates of institutions, disabled persons, and persons doing only incidental unpaid family work (less than 15 hours during the reference week).

Hours Worked

All persons in the 15- and 5-percent samples who reported working during the reference week were asked to report the number of hours that they worked. The statistics on hours worked pertain to the number of hours actually worked at all jobs, and do not necessarily reflect the number of hours usually worked or the scheduled number of hours. The category "at work, full time" includes persons who worked 35 hours or more during the reference week, and the category "at work, part time" includes persons who worked 1 to 34 hours during the reference week. The number of persons who worked only a small number of hours is probably understated since such persons sometimes consider themselves as not working. The possible effect on "hours worked" of the occurrence of a holiday during the reference week is discussed in the section on "Reference week," above.

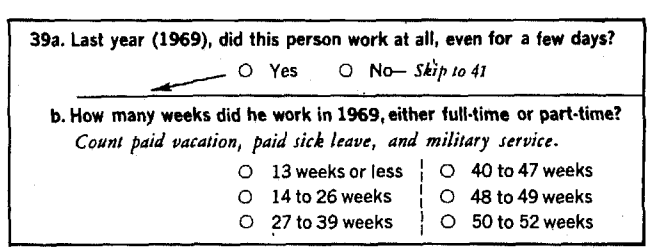
Weeks Worked in 1969

Definition.—The data on weeks worked in 1969 were derived from answers to questions 39a and b (see facsimiles of questionnaire items below).

The questions were asked of all persons 14 years old and over in the 15- and 5-percent samples. In most tables, data are shown for persons 16 years old and over to conform with the universe for employment status data. Data on weeks worked in 1969 for persons 14 and 15 years old and 14 years old and over are also shown in selected tables.

The data pertain to the number of weeks during 1969 in which a person did any work for pay or profit (including paid vacation and sick leave) or worked without pay on a family farm or in a family business. Weeks of active service in the Armed Forces are also included. It is probable that the number of persons who worked in 1969 and the number of weeks they worked are understated since there is some tendency for respondents to forget intermittent or short periods of employment or to exclude weeks worked without pay.

Median weeks worked.—The median weeks worked is the value which divides the distribution of persons with work experience into two equal parts—one-half the cases falling below this value and one-half the cases exceeding this value. The median is based on the distribution among the six weeks-worked categories of all persons who reported working during the previous year. If the value fell in the terminal category of 50 to 52 weeks, a median of 52 weeks was assigned. If the value fell in the category 13 weeks or less, a median of 10 weeks was assigned. The determination of set medians for these two categories was based on previous experience with the central tendency of the distribution within the categories. Specifically, a median of 52 weeks reflects the predominance of full-year workers, and a median of 10 weeks reflects the predominance of students working at summer jobs.



39a. Last year (1969), did this person work at all, even for a few days?
○ Yes ○ No— *Skip to 41*

b. How many weeks did he work in 1969, either full-time or part-time?
Count paid vacation, paid sick leave, and military service.

○ 13 weeks or less	○ 40 to 47 weeks
○ 14 to 26 weeks	○ 48 to 49 weeks
○ 27 to 39 weeks	○ 50 to 52 weeks

Comparability With Other Data

Employment status.—The questionnaire items and employment status concepts for the 1970 census differed in many respects from those associated with the 1950 and 1960 censuses. The employment status concepts were revised to conform with the official government concepts of employment and unemployment instituted in January 1967. The employment status items for 1970 differed from the series of items asked in the earlier censuses in the following ways:

(1) The 1970 questionnaire introduced a distinction between persons "looking for work" and persons "on layoff." (In 1960 the two groups were combined.)

(2) A specific time period—during the past four weeks—was added to the "looking for work" question. This was done to introduce an explicit time reference for jobseeking activities which was implied but not stated in the 1960 and 1950 jobseeking items.

(3) The requirement that a person be currently available for work in order to be counted as unemployed was added for 1970. Therefore, a choice of responses designed to determine availability to accept a job was provided in the question on looking for work.

(4) Persons reported as being temporarily absent from a job during the reference week for reasons other than layoff were classified as "employed, with a job but not at work" even if they were looking for work. In 1960, such persons were classified as unemployed if they were looking for work.

The figures on employment status from the decennial census are generally comparable with similar data collected in the Current Population Survey. However, some differences may exist due to variations in enumeration and processing techniques. A comparison of 1970, 1960, and 1950 data on employment status from the decennial census and from the Current Population Survey (CPS) shows some reduction in the difference between figures from the two sources (see table I). The most noteworthy fact evidenced from this table is the reduction in the difference between census figures and CPS figures on unemployment. In 1950, the census figure was 19.4 percent below the CPS estimate. In 1960, this difference was reduced to 4.2 percent, and in 1970, to 1.5 percent. The differences in civilian labor force levels between the census and the CPS were approximately the same in 1970 as they were in 1960. For males, the difference was slightly greater, but this increase was counteracted by a decrease in the difference for females. The apparent improvement in the census data on unemployment most likely resulted from the revisions in the employment status questions and concepts described above.

Because employment data from the census are obtained from respondents in households, they differ from statistics based on reports from individual business establishments, farm enterprises, and certain government programs. Persons employed at more than one job are counted only once in the census and are classified according to the job at which they worked the greatest number of hours during the reference week. In statistics based on reports from business and farm establishments, persons who work for more than one establishment may be counted more than once. Moreover, other series, unlike those presented here, may exclude private household workers, unpaid family workers, and self-employed persons, but may include workers less than 16 years of age.

An additional difference in the data arises from the fact that persons who had a job but were not at work are included with the employed in the statistics shown here, whereas many of these persons are likely to be excluded from employment figures based on establishment payroll reports. Furthermore, the data in this report include persons on the basis of their place of residence regardless of where they work, whereas establishment data report persons at their place of work regardless of where they live. This latter consideration is particularly significant when comparing data for workers who commute between areas.

For a number of reasons, the unemployment figures of the Bureau of the Census are not comparable with published figures on unemployment compensation claims. Generally, persons such as private household workers, agricultural workers, State and local government workers, self-employed workers, new workers, and workers whose rights to unemployment benefits have expired are not eligible for unemployment compensation. Further, many employees of small firms are not covered by unemployment insurance. In addition, the qualifications for drawing unemployment compensation differ from the definition of unemployment used by the Bureau of the Census. Persons working only a few hours during the week and persons temporarily absent

from work for reasons other than layoff are sometimes eligible for unemployment compensation but are classified as "employed" in the census reports. Differences in the geographic distribution of unemployment data arise because the place where claims are filed may not necessarily be the same as the place of residence of the unemployed worker.

Weeks worked.—The data on weeks worked collected in the 1970 census are comparable with data from the 1960 census but may not be entirely comparable with data from the 1940 and 1950 censuses. On the 1970 and 1960 questionnaires, two separate questions were used to obtain this information. The first identified persons with any work experience during the year and, thus, indicated those persons for whom the questions on number of weeks worked and earned income were applicable. In 1940 and 1950, however, the questionnaires contained only a single question on number of weeks worked.

Table I.—**Comparison of Employment Status by Sex Between the Census and the Current Population Survey: 1970, 1960, and 1950**
