GENERAL

This report provides detailed cross-classifications of data on the income in 1969 of families, family members, unrelated individuals, and persons in the experienced civilian labor force according to various social and economic characteristics, for the United States, by type of residence. The data are based on the 1970 Census of Population. Legal provision for this census, which was conducted as of April 1, 1970, was made in the Act of Congress of August 31, 1954 (amended August 1957), which codified Title 13, United States Code.

A major portion of the information compiled from the 1970 Census of Population appears in Volume I, **Characteristics of the Population**, which focuses on the presentation of data for States, counties, places, and other areas of the United States. The present report is part of Volume II, **Subject Reports**, wherein most reports concentrate on the presentation of national and regional data for a particular subject. For a description of

Volumes I and II, as well as other elements of the data dissemination program of the 1970 Population and Housing Census, see Appendix E, "Publication and Computer Summary Tape Program."

The content and procedures of the 1970 census were determined after evaluation of the results of the 1960 census, consultation with a wide variety of users of census data, and extensive field pretesting. A number of changes were introduced in 1970 to improve the usefulness of the census results. For the characteristics shown in this report, the changes do not, however, affect to any appreciable extent the comparability of the 1970 data with those for 1960.

More detailed information on the technical and procedural matters covered in the text of this report can be obtained by writing to the Director, Bureau of the Census, Washington, D.C. 20233. Such information will also appear in later reports of the 1970 census.

Organization of the text.—The text consists of this introduction and Appendixes A through E, which appear after the tables. The introduction contains information relating specifically to the principal subject of this report, such as definitions of terms and editing procedures. Appendix A provides general information concerning the presentation of data in this series of reports and the data collection and processing procedures used in the 1970 census. Appendix B describes the various area classifications (e.g., urban and rural residence, urbanized areas, etc.) and also explains the residence rules used in counting the population. Appendix C provides brief definitions and ex-

planations of subjects covered in cross-classifications in this report and other reports in this series. Appendix D presents information on sources of error in the data, sampling variability, ratio estimation, and editing procedures. Appendix E summarizes the data dissemination program.

Content of the tables.—Major emphasis is placed on the composition of family income, including the major sources of family income, i.e., wages and salaries, nonfarm and farm self-employment, Social Security, public assistance, and other income. Tables 2, 8, and 10 include data on the poverty status of families and family members. Table 8 presents statistics for persons in relation to own income by age, relationship to head, race, and sex cross-classified by family income and poverty status. Table 11 compares wage or salary income distributions for 1939, 1949, 1959, and 1969. Table A-1 presents information on the percent of families for whom family income or income of the family head was allocated for nonresponse.

Sample size.—The statistics in this report are based on a 5-percent sample inflated to represent the total population. (See "Data Collection Procedures" in Appendix A.) An explanation of the ratio estimation procedure and information on the sampling variability associated with the data are contained in Appendix D. Table I compares the 1969 income distribution of families and unrelated individuals as presented in this report, based on the 5-percent sample, with the corresponding statistics based on the 20-percent sample presented in Volume I of the 1970 Census of Population.

INTRODUCTION—Continued

TABLE I. Comparison of 20-Percent and 5-Percent Sample Data on Income in 1969 of Families and Unrelated Individuals, by Race of Head, for the United States: 1970

Total money income	Total					Negro				
	20-percent sample	5-percent sample	Percent distribution		Ratio of 20-percent sample number to 5-percent sample number	20-percent sample	5-percent sample	Percent distribution		Ratio of 20-percent sample number to 5-percent sample number
			20-percent sample	5-percent sample				20-percent sample	5-percent sample

RELATED MATERIALS

1970 census reports.—Basic distributions of income in 1969 of families and unrelated individuals, from a

20-percent sample of the population for the United States, each of the States, the District of Columbia, counties, standard metropolitan statistical areas, urbanized areas, and places of

2,500 or more are presented in chapter C of parts 1 through 52 of 1970 Census of Population Volume 1, Characteristics of the Population. Statistics on income in 1969 by de-

tailed characteristics, including cross-classification by age, weeks worked, education, type of family, type of household, etc., appear in chapter D of the 1970 Census of Population Volume I, **Characteristics of the Population**, for the United States, regions, divisions, States, and standard metropolitan statistical areas of 250,000 or more. Similar characteristics for the Commonwealth of Puerto Rico are presented in part 53 of Volume I, and less detailed statistics for selected outlying areas in parts 54 through 58. Chapters C and D were originally published as paperbound reports in Series PC(1)-C, **General Social and Economic Characteristics**, and Series PC(1)-D, **Detailed Characteristics**. Statistics on family income in 1969 for individual tracts are found in Series PHC(1), **Census Tracts**, for each of the 241 tracted standard metropolitan statistical areas in the United States and Puerto Rico.

Other reports planned for Volume II on subjects related to income cover such subjects as earnings cross-classified by occupation and education, net farm self-employment income, characteristics of persons of poverty status, and population and housing characteristics of low-income areas. Volume II reports on subjects other than income frequently include cross-classifications by income of families and persons.

Statistics on income in 1969 of families and primary individuals by housing and household characteristics, such as tenure, household composition, and gross rent and value, are presented in 1970 Census of Housing Volume II, **Metropolitan Housing Characteristics**, for the United States, regions, standard metropolitan statistical areas, central cities, and places of 50,000 inhabitants or more. Additional data

on income cross-tabulated by housing and household subjects are presented in 1970 Census of Housing Volume IV, **Components of Inventory Change**, and Volume V, **Residential Finance**.

Reports from earlier censuses.—In the 1960 census reports, data on income in 1959 of families and persons from a 5-percent sample, cross-classified by most of the same characteristics shown in this report, were published in 1960 Census of Population Volume II, **Subject Reports, PC(2)-4C, Sources and Structure of Family Income**. Basic distributions of income in 1959 of families, unrelated individuals, and persons 14 years old and over, based on a 25-percent sample, for the United States, regions, divisions, States, standard metropolitan statistical areas, cities, and counties were published in 1960 Census of Population Volume I, **Characteristics of the Population**. Statistics on family income in 1959 for individual tracts appeared in Series PHC(1), **Census Tracts**, for each of 180 tracted areas in the United States and Puerto Rico. Several of the other Volume II and Volume III reports of the 1960 Census of Population contained information on income of families and persons. Data on income in 1959 of primary families or individuals by housing and household characteristics were presented in 1960 Census of Housing Volume II, **Metropolitan Housing**; Volume V, part 1, **Residential Finance—Homeowner Properties**; Volume VI, **Rural Housing**; and Volume VII, **Housing of Senior Citizens**.

Statistics on income similar to those published in 1960 and 1970 were published in the 1950 Census of Population Volume II, **Characteristics of the Population**, and Volume IV, **Special Reports**, part 2, chapter A,

General Characteristics of Families. Income statistics from the 1940 census were limited to wage and salary income in 1939 and were published in two reports of that census: **Families: Family Wage or Salary Income in 1939** and **The Labor Force: Wage or Salary Income in 1939**.

Current Population Survey.—Each year since 1945, the Current Population Survey (CPS), conducted by the Bureau of the Census, has provided national estimates of the income of families, unrelated individuals, and persons 14 years old and over cross-classified by a number of characteristics (see **Current Population Reports, Series P-60**). The income statistics provided by the CPS are, in general, designed to be comparable with the decennial census statistics. The actual comparability of the statistics is discussed in the paragraphs on "Comparability with Other Data" in the section on "Definitions and Explanations of Principal Subjects."

Unpublished data.—For most of the Volume II reports, statistics in addition to those published in the report are available on a reimbursable basis from computer tape files. Data shown for the United States as a whole are available for regions, divisions, and States, and, in a number of instances, the data for some characteristics were tabulated in greater detail than shown in the reports. Requests for unpublished data, giving a specific description of the figures desired, may be made by writing to the Director, Bureau of the Census, Washington, D.C. 20233. Inquiries concerning unpublished data should be transmitted to the Bureau as soon as possible because tape files are not maintained indefinitely.

DEFINITIONS AND EXPLANATIONS OF PRINCIPAL SUBJECTS

The definitions and explanations below relate only to the principal subjects of this report. Brief definitions of other items that appear in cross-classifications in the tables of this report may be found in Appendix C.

Income in 1969

The data on income were derived from answers to questions 40 and 41 (see facsimile of questionnaire items below).

Information on money income received in the calendar year 1969 was requested from all persons 14 years old and over in the 20-percent sample. "Total income" is the algebraic sum of the amounts reported in item 40a (Wage or salary income), item 40b (Nonfarm net self-employment income), item 40c (Farm net self-employment income), item 41a (Social Security or railroad retirement income), item 41b (Public assistance or welfare income), and item 41c (All other income). "Earnings" is the algebraic sum of the amounts reported

as wage or salary income and nonfarm and farm net self-employment income. The figures represent the amount of income received before deductions for personal income taxes, Social Security, bond purchases, union dues, medicare deductions, etc.

Receipts from the following sources were not included as income: money received from the sale of property, (unless the recipient was engaged in the business of selling such property); the value of income "in kind" such as food produced and consumed in the home or free living quarters; withdrawal of bank deposits; money borrowed; tax refunds; exchange of money between relatives living in the same household; gifts and lump-sum inheritances, insurance payments, and other types of lump-sum receipts.

Type of Income

Wage or salary income.—This is defined as the total money earnings received for work performed as an employee at any time during the calendar year 1969. It includes wages, salary, pay from Armed Forces, commissions, tips, piece-rate payments, and cash bonuses earned.

Nonfarm net self-employment income.—This is defined as net money income (gross receipts minus business expenses) received from a business, professional enterprise, or partnership in which the person was engaged on his own account. Gross receipts include the value of all goods sold and services rendered. Business expenses include cost of goods purchased, rent, heat, light, power, depreciation charges, wages and salaries paid, business taxes (not personal income taxes), etc.

<p>40. Earnings in 1969— Fill parts a, b, and c for everyone who worked any time in 1969 even if he had no income. (If exact amount is not known, give best estimate.)</p>	
<p>a. How much did this person earn in 1969 in wages, salary, commissions, bonuses, or tips from all jobs? (Before deductions for taxes, bonds, dues, or other items.)</p>	<p>\$ _____ .00 (Dollars only) OR <input type="radio"/> None</p>
<p>b. How much did he earn in 1969 from his own nonfarm business, professional practice, or partnership? (Net after business expenses. If business lost money, write "Lost" above amount.)</p>	<p>\$ _____ .00 (Dollars only) OR <input type="radio"/> None</p>
<p>c. How much did he earn in 1969 from his own farm? (Net after operating expenses. Include earnings as a tenant farmer or sharecropper. If farm lost money, write "Lost" above amount.)</p>	<p>\$ _____ .00 (Dollars only) OR <input type="radio"/> None</p>
<p>41. Income other than earnings in 1969— Fill parts a, b, and c. (If exact amount is not known, give best estimate.)</p>	
<p>a. How much did this person receive in 1969 from Social Security or Railroad Retirement?</p>	<p>\$ _____ .00 (Dollars only) OR <input type="radio"/> None</p>
<p>b. How much did he receive in 1969 from public assistance or welfare payments? Include aid for dependent children, old age assistance, general assistance, aid to the blind or totally disabled. Exclude separate payments for hospital or other medical care.</p>	<p>\$ _____ .00 (Dollars only) OR <input type="radio"/> None</p>
<p>c. How much did he receive in 1969 from all other sources? Include interest, dividends, veterans' payments, pensions, and other regular payments. (See instruction sheet.)</p>	<p>\$ _____ .00 (Dollars only) OR <input type="radio"/> None</p>

Farm net self-employment income.—

This is defined as net money income (gross receipts minus operating expenses) received from the operation of a farm by a person on his own account, as an owner, renter, or sharecropper. Gross receipts include the value of all products sold, governmental subsidies, money received from the rental of farm equipment to others, and incidental receipts from the sale of wood, sand, and gravel, etc. Operating expenses include the cost of fuel, fertilizer, seed, and other farming supplies, cash wages paid to farmhands, depreciation charges, cash rent, interest on farm mortgages, farm building repairs, farm taxes (not Federal, State, and local income taxes), etc. The value of fuel, food, and other farm products used for family living is not included as part of net income.

Social Security or railroad retirement income.—This includes cash receipts of Social Security pensions, survivors' benefits, permanent disability insurance payments, and special benefit payments made by the Social Security Administration (under the National old-age, survivors, disability, and health insurance programs) before deductions of health insurance premiums. "Medicare" reimbursements are not included. Cash receipts of retirement, disability, and survivors' benefit payments made by the U.S. Government under the Railroad Retirement Act are also included.

Public assistance income.—This includes cash receipts of payments made under the following public assistance programs: aid to families with dependent children, old-age assistance, general assistance, aid to the blind, and aid to the permanently and totally

disabled. Separate payments received for hospital or other medical care are excluded from this item.

Income from all other sources.—This includes money income received from sources such as interest; dividends; net income (or loss) from property rentals; net receipts from roomers or boarders; veterans' payments; public or private pensions; periodic receipts from insurance policies or annuities; unemployment insurance benefits; workmen's compensation cash benefits; net royalties; periodic payments from estates and trust funds; alimony or child support from persons who are not members of the household; net gambling gains; nonservice scholarships and fellowships; and money received for transportation and/or subsistence by persons participating in special governmental training programs, e.g., under the Manpower Development and Training Act.

Income of families and unrelated individuals.—This report includes information on income of families, unrelated individuals 14 years old and over, and persons 14 years old and over by detailed social and economic characteristics. In compiling statistics on family income, the incomes of all members 14 years old and over in each family are summed and treated as a single amount. However, in compiling the income data for unrelated individuals and persons 14 years old and over, the total amount of their own income is used. Although the income statistics cover the calendar year 1969, the characteristics of persons and the composition of families refer to the time of enumeration (April 1970). Thus, the income of the family does not include amounts received by persons

who were members of the family during all or part of the calendar year 1969 if these persons no longer resided with the family at the time of enumeration. On the other hand, family income amounts reported by related persons who did not reside with the family during 1969 but who were members of the family at the time of enumeration were included. For most families, however, the income reported was received by persons who were members of the family throughout 1969.

Median income.—The median income is the amount which divides the distribution into two equal groups, one having incomes above the median, one having incomes below the median. For families or unrelated individuals, the median income is based on the total number of families or unrelated individuals; whereas, for persons, the medians are based on the distributions of persons 14 years old and over with income. For the six types of income, the medians are based on families, unrelated individuals, or persons having those types of income.

Mean income.—The mean income is the amount obtained by dividing the total income of a group by the number of families, unrelated individuals, or persons in that group. For the six income types, the means are based on the number of income recipients having those types of incomes. It should be noted that the maximum income amount that can be aggregated for each family, unrelated individual, or person is 1.3 million dollars for total income and \$995,000 for any one type of income. Thus, it is conceivable that the sum of the aggregate of all income types may exceed the aggregate of the total.

Index of income concentration.—The index of income concentration is a statistical measure derived from the Lorenz Curve. The Lorenz Curve is obtained by plotting the cumulative percent of families on the abscissa against the cumulative percent of aggregate income on the ordinate as accounted for by these units. Aggregate income is obtained by summing the income of all families in each income class interval whose total income falls in that income class interval.

If all units had exactly the same relative income, perfect equality would be represented by the diagonal shown in the diagram. Curves drawn to actual data invariably fall below this line and the greater the inequality in the distribution of income, the greater the area between the diagonal line and the Lorenz Curve.

The index of income concentration is defined as the ratio of the area between the diagonal and the Lorenz Curve to the total area under the diagonal. This relationship can be expressed as follows, using the notation in the diagram above.

$$L = \frac{A}{A+B} = \frac{\text{area betw. curve and diagonal}}{\text{area under diagonal}}$$

The index of income concentration ranges from 0.0 to 1.0. As the index approaches the limit of 1.0, the greater will be the inequality of the income distribution.

Number of earners.—This number includes all persons in the family with \$1 or more in wages or salary, or \$1 or more or a loss amount in net income from nonfarm or farm self-employment.

Income recipient.—A person is considered an income recipient when he received \$1 or more in wage or salary, Social Security, or public assistance income, or \$1 or more or a loss in nonfarm or farm self-employment income or other income.

Limitations of the Data

Since questionnaire entries for income are frequently based on memory and not on records, many persons tend to forget minor or irregular sources of income, resulting in the under-reporting of income. In addition, there are errors of reporting due to misunderstanding of the income questions. One type of such error is the reporting of gross instead of net dollar amounts for the two questions on net self-employment income, which results in the overestimation of these items. Another common error is the reporting of identical dollar amounts in two of the six income items where a respondent with only one source of income assumed that the second amount should be entered to represent total income. Such instances of over-reporting would have an impact on the level of mean nonfarm or farm self-employment income and mean total income published for the various geographical subdivisions of the State.

Telephone callback procedures were instituted in the coding operation to reduce some of these reporting errors and to improve the accuracy of income data. Moreover, many reporting errors were rectified through the coding and the computer editing procedures, resulting in improved consistency of reported income items with work experience, occupation, and class-of-worker information. For example, if a person reported that he was a self-employed (not incorporated) farm worker but had reported wage and salary earnings only, the latter amount was shifted to net farm self-employment income. Another type of problem found involved nonreporting of income data. Where income information was not reported, elaborate editing and allocation procedures were devised to impute appropriate values (either "none" or positive or negative dollar amounts) for the missing entries. These procedures are described in more detail in Appendix D, "Accuracy of the Data."

The income tables for families and unrelated individuals include in the lowest income group (less than \$1,000) those that were classified as having no 1969 income as defined in the census. Many of these were living on income "in kind," savings, or gifts; were newly created families; or were families in which the sole breadwinner had recently died or left the household. However, many of the families and unrelated individuals who reported no income probably had some money income which was not recorded in the census.

The income data in this report cover money income only. The fact that many farm families receive an important part of their income in the form of "free" housing and goods produced

and consumed on the farm rather than in money should be taken into consideration in comparing the income of farm and nonfarm residents. It should be noted that nonmoney incomes are also received by some nonfarm residents. They often take the form of business expense accounts, use of business transportation and facilities, or partial compensation by business for medical and educational expenses. Many low income families also receive income "in kind" from public welfare programs. In comparing income data for 1969 with earlier years, it should be noted that an increase or decrease in money income does not necessarily represent a comparable change in real income, unless adjustments for changes in prices are made.

Comparability with Other Data

Earlier censuses.—The income data collected in the 1940, 1950, and 1960 censuses were basically similar to the 1970 census data, but there were variations in the detail of the questions. In 1960, information on income was obtained from all members comprising every fourth household and every fourth person 14 years old and over living in group quarters. Each person was required to report (a) wage or salary income (b) net self-employment income and (c) income other than earnings received in 1959. Between the 1960 and 1970 censuses, there were also changes in the processing of the data. In the 1960 census, an assumption was made in the editing process that no other type of income was received by a person who had reported the receipts of either wage and salary income or self-employment income but who had failed to report the receipt of other money income. This person was considered as unallocated.

In the 1970 census, this assumption was not made. Generally, all missing values were imputed either as "none" or a dollar amount. If a person reported a dollar amount in either (a) wage or salary income, (b) net nonfarm self-employment income, or (c) net farm self-employment income, he was designated as unallocated only if no further dollar amounts were imputed for any additional missing entries. Moreover, there was a difference in the method of computer derivation of aggregate income from individual amounts that were rounded to tens, hundreds, and thousands in the coding operation. In the 1960 census processing, \$5, \$50, and \$500, respectively, were added by the computer to the absolute value of each amount that was coded in tens, hundreds, or thousands of dollars. Entries of \$25,000 or more or losses of \$9,900 or more were treated as \$50,000 and minus \$10,500, respectively. In the 1970 census, income amounts were coded in either hundreds or tens of thousands of dollars; \$50 was added by the computer to each amount coded in hundreds of dollars and \$5,000 to each amount coded in tens of thousands of dollars. Entries of \$990,000 or more or losses of \$9,900 or more were treated as \$995,000 and minus \$9,950, respectively, in all computer derivations of income aggregates. The coding schemes used in both the 1960 and 1970 censuses were developed to accommodate space limitations on the questionnaires.

In both the 1960 and 1970 censuses, all nonrespondents on income (whether heads of families or other persons) were assigned the reported income of persons with similar characteristics, as described in Appendix D, "Accuracy of the Data."

In 1950, information on income

was obtained from every fifth person 14 years old and over. If the sample person was the head of the family, the income questions were repeated for the other family members as a group in order to obtain the income of the whole family. In tabulating family income for the 1950 census, the assumption was made that there was no other income in the family when only the head's income was reported.

In 1940, all persons 14 years old and over were asked to report (a) the amount of wages or salary received in 1939 and (b) whether income amounting to \$50 or more was received in 1939 from sources other than wages or salaries.

Current Population Survey.—A comparison of the family income distributions for the United States from the 1970 census and from the March 1970 Current Population Survey (CPS) is shown in Table II. Both the census and CPS distributions include income nonrespondents whose incomes were estimated on the basis of their social and economic characteristics.

Income tax data.—For several reasons, the income data shown in this report are not directly comparable with those which may be obtained from statistical summaries of income tax returns. Income, as defined for tax purposes, differs somewhat from the Bureau of the Census concept. Moreover, the coverage of income tax statistics is different because of the exemptions of persons having small amounts of income and the inclusion of net capital gains in tax returns. Furthermore, some income tax returns are filed as separate returns and others as joint returns; and consequently, the income reporting unit is not consistently either a family or a person.

TABLE II. Percent Distribution of Families by Family Income According to 1970 Census and March 1970 Current Population Survey

Family income	Census (20-percent sample)	CPS	Percentage point difference
Total	100.0	100.0	...
Less than \$1,000	2.5	1.6	-0.9
\$1,000 to \$1,999	3.4	3.2	-0.2
\$2,000 to \$2,999	4.4	4.7	0.3
\$3,000 to \$3,999	4.9	5.3	0.4
\$4,000 to \$4,999	5.1	5.4	0.3
\$5,000 to \$5,999	5.7	5.9	0.2
\$6,000 to \$6,999	6.1	6.4	0.3
\$7,000 to \$7,999	6.7	7.3	0.6
\$8,000 to \$8,999	7.1	7.4	0.3
\$9,000 to \$9,999	6.8	7.0	0.2
\$10,000 to \$11,999	12.9	12.9	...
\$12,000 to \$14,999	13.7	13.7	...
\$15,000 to \$24,999	16.0	15.6	-0.4
\$25,000 to \$49,999	3.9	3.3	-0.6
\$50,000 or more	0.7	0.4	-0.3

Social Security Administration earnings record data.—The earnings data shown in this report are not directly comparable with earnings records of the Social Security Administration. The coverage of the earnings record data for 1969 excludes the earnings of most civilian government employees, some employees of nonprofit organizations, workers covered by the Railroad Retirement Act, and persons not covered by the program because of insufficient earnings. Furthermore, earnings received from any one employer in excess of \$7,800 in 1969 are not covered by the earnings record data. Finally, since census data are obtained from household questionnaires, they differ from Social Security Administration earnings record data, which are based upon

employers' reports and the Federal income tax returns of self-employed persons.

Bureau of Economic Analysis State and SMSA income series.—The Bureau of Economic Analysis (BEA) of the Department of Commerce publishes annual data on aggregate and per capita personal income received by the population for each State and selected SMSA's. If the aggregate income was estimated from the income statistics shown in this report, it would be less than that shown in the BEA income series for several reasons. The Bureau of the Census data are obtained directly from households, whereas the BEA income series is estimated largely on the basis of data from administrative records of business and govern-

mental sources. Moreover, the definitions of income are different. The BEA income series includes some items not included in the income data shown in this report, such as income "in kind," income received by nonprofit institutions, the value of the services of banks and other financial intermediaries rendered to persons without the assessment of specific charges, medicare payments, and the income of persons who died or emigrated prior to April 1, 1970. On the other hand, the census income data include contributions for support received from persons not residing in the same household and employee contributions for social insurance.

Although the primary purpose of the income questions in the 1970 census was to provide distributions of families and of persons 14 years old and over by income levels, estimates of aggregate income can be obtained from these data. A comparison of aggregate income estimated from the 1970 census returns with estimates prepared by BEA indicates that aggregate total money income of persons 14 years old and over was about 92 percent of the BEA estimates for the United States after these estimates had been adjusted to make them as nearly comparable as possible with the income concept used by the Bureau of the Census. Similar comparisons of 1960 and 1950 census data showed that the corresponding ratios in those years were 94 and 91 percent, respectively. The aggregate derived from the distributions of families and unrelated individuals was 92 percent of the comparable BEA total, as compared with 95 percent in 1960 and 81 percent in 1950.
